OVERVIEW

Cisco HyperFlex™ Systems unlock the full potential of hyperconvergence. The systems are based on an end-to-end software-defined infrastructure, combining software-defined computing in the form of Cisco Unified Computing System (Cisco UCS) servers; software-defined storage with the powerful Cisco HX Data Platform and software-defined networking with the Cisco UCS fabric that will integrate smoothly with Cisco Application Centric Infrastructure (Cisco ACI™). Together with a single point of connectivity and hardware management, these technologies deliver a preintegrated and adaptable cluster that is ready to provide a unified pool of resources to power applications as your business needs dictate.

The Cisco HyperFlex HX240C M6 All NVMe/All Flash/Hybrid Server Nodes extends the capabilities of Cisco's HyperFlex portfolio in a 2U form factor with the addition of the 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake), 16 DIMM slots per CPU for 3200-MHz DDR4 DIMMs with DIMM capacity points up to 256 GB. The maximum memory capacity for 2 CPUs is listed here:

- 8 TB (32 x 256 GB DDR4 DIMMs), or
- 12 TB (16 x 256 GB DDR4 DIMMs and 16 x 512 GB Intel® Optane™ Persistent Memory Modules (PMem)).

There are three servers to choose from:

- **HXAF240C-M6SN (All NVMe)** (see [Figure 1 on page 6](#)):
 - Up to 24 front NVMe (only) drives.
 - I/O centric option provides up to 6 PCIe slots using two rear risers.
 - Storage-centric option provides 3 PCIe slots using slots in one of the rear risers and up to 2 rear drives.
- **HXAF240C-M6SX (All Flash)** (see [Figure 1 on page 7](#)):
 - Up to 24 front SFF SAS/SATA SSDs and NVMe caching drive.
 - I/O centric option provides up to 8 PCIe slots using all three rear risers.
 - Storage-centric option provides 3 PCIe slots using slots in one of the rear risers and two rear risers with a total of up to 4 SFF drives.
- **HX240C-M6SX (Hybrid)** (see [Figure 1 on page 7](#)):
 - Up to 24 front SFF SAS/SATA HDDs and SSDs
 - I/O centric option provides up to 8 PCIe slots using all three rear risers
 - Storage-centric option provides 3 PCIe slots using slots in one of the rear risers and two rear risers with a total of up to 4 SFF drives

The server provides one or two internal slots (depending on the server type) for the following:

- Two slots for Cisco 12G SAS pass-through HBAs. Each HBA controls up to 16 SAS/SATA drives

NOTE: PCIe drives are controlled directly from the CPUs.

The HyperFlex HX240C M6 All NVMe/All Flash/Hybrid Server Nodes has two LOM ports (10Gbase-T LOM) and a single 1 GbE management port. A modular LAN on motherboard (mLOM) module provides up to two 100 GbE ports. A connector on the front of the chassis provides KVM functionality.

Deployment Options

Starting with HyperFlex 4.5(2a) the following 2 deployment options are supported:

- **HX Data Center with Fabric Interconnect** - This deployment option connects the server to Cisco Fabric Interconnect. The installation for this type of deployment can be done using the standalone installer or from the Intersight.
- **HX Data Center without Fabric Interconnect** - This deployment option allows server nodes to be directly connected to existing switches. The installation for this type of deployment can be done from the Intersight only.

BASE SERVER NODE STANDARD CAPABILITIES and FEATURES

Table 1 lists the capabilities and features of the base server. Details about how to configure the server for a particular feature or capability (for example, number of processors, disk drives, or amount of memory) are provided in *CONFIGURING the SERVER, page 23*.

Table 1 Capabilities and Features

Capability/Feature	Description
Chassis	Two rack unit (2RU) chassis
CPU	One or two 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake) ¹
Chipset	Intel® C621A series chipset
Memory	32 slots for registered DIMMs (RDIMMs) or load-reduced DIMMs (LRDIMMs) and support for Intel® Optane™ Persistent Memory Modules (PMem)
Multi-bit Error Protection	This server supports multi-bit error protection.
Video	<p>The Cisco Integrated Management Controller (CIMC) provides video using the Matrox G200e video/graphics controller:</p> <ul style="list-style-type: none"> ■ Integrated 2D graphics core with hardware acceleration ■ Embedded DDR memory interface supports up to 512 MB of addressable memory (8 MB is allocated by default to video memory) ■ Supports display resolutions up to 1920 x 1200 16bpp @ 60Hz ■ High-speed integrated 24-bit RAMDAC ■ Single lane PCI-Express host interface running at Gen 1 speed
Power subsystem	<p>Up to two of the following hot-swappable power supplies:</p> <ul style="list-style-type: none"> ■ 1050 W (AC) ■ 1050 W (DC) ■ 1600 W (AC) ■ 2300 W (AC) <p>One power supply is mandatory; one more can be added for 1 + 1 redundancy.</p>
Front Panel	A front panel controller provides status indications and control buttons.
ACPI	This server supports the advanced configuration and power interface (ACPI) 6.2 standard.
Fans	Six hot-swappable fans for front-to-rear cooling

Notes:

1. This product may not be purchased outside of the approved bundles (must be ordered under the MLB)

The Cisco HyperFlex HX240C M6 All NVMe, All Flash and Hybrid server nodes:

- Includes 24 drive backplane.
- Does not include power supply, CPU, memory (DIMMs or PMem), hard disk drives (HDDs), solid-state drives (SSDs), NVMe drives, SD cards, riser 1, riser 2, riser 3, tool-less rail kit, or PCIe cards.

	<p>NOTE:</p> <ul style="list-style-type: none"> ■ Refer to Cisco HyperFlex Drive Compatibility document for future expansion and drive compatibility within the same node and HX cluster. ■ Use the steps on the following pages to configure the server with the components that you want to include.

Table 4 Deployment Modes

Product ID (PID)	Description
HX-DC-FI	Deployment mode Selection PID to use Hyperflex with FI
HX-DC-NO-FI	Deployment mode Selection PID to use Hyperflex without FI

- **HX Data Center with Fabric Interconnect** - This deployment option connects the server to Cisco Fabric Interconnect. The installation for this type of deployment can be done using the standalone installer or from the Intersight. This deployment mode has been supported since launch of HyperFlex.
- **HX Data Center without Fabric Interconnect** - This deployment option allows server nodes to be directly connected to existing switches. The installation for this type of deployment can be done from the Intersight only.

Note the following apply:

- No support for SED drives
- No hyper-V support
- No support for PMem
- No support for Additional PCIe Cisco VIC
- No support for stretch cluster
- No support for Application acceleration engine

Selecting this option will hence grey out the unsupported options during ordering

NOTE:

- HX Data Center without Fabric Interconnect (DC-no-FI) All NVMe - HXAF240C-M6SN require HXDP 5.0(1b) or higher.
- If no selection is done, the deployment mode is assumed to be DC with FI.

STEP 3 SELECT RISER CARDS (REQUIRED)

Select risers from [Table 5](#).

Table 5 PIDs of the Risers

Product ID (PID)	Description
HX-RIS1A-240M6 (default riser)	C240 M6 Riser1A (controlled with CPU1) <ul style="list-style-type: none"> ■ PCIe Slot 1 (bottom slot): full height, 3/4 length, x8, NCSI ■ PCIe Slot 2 (middle slot): full height, full length (GPU Card), x16, NCSI ■ PCIe Slot 3 (top slot): full height, full length, x8

NOTE:

If there is any PCIe slot that does not have a card installed, you must order a blanking panel for that slot (UCSC-FBRS2-C240M6 = for riser 2 and UCSC-FBRS3-C240M6= for riser 3).

For additional details, see [Riser Card Configuration and Options, page 87](#).

STEP 4 SELECT CPU(s)

The standard CPU features are:

- 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake)
- Intel® C621A series chipset
- Cache size of up to 60 MB
- Up to 40 cores

Select CPUs

The available CPUs are listed in [Table 6](#)

Notes:

1. UPI = Ultra Path Interconnect.
2. If higher or lower speed DIMMs are selected than what is shown in [Table 8 on page 33](#) for a given CPU speed, the DIMMs will be clocked at the lowest common denominator of CPU clock and DIMM clock.
3. The maximum number of HX-CPU-I8351N CPUs is one
4. The maximum number of HX-CPU-I6314U CPUs is one
5. The maximum number of HX-CPU-I6312U CPUs is one

CAUTION: For systems configured with 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake) operating above 28° C [82.4° F], a fan fault or executing workloads with extensive use of heavy instructions sets such as Intel® Advanced Vector Extensions 512 (Intel® AVX-512), may assert thermal and/or performance faults with an associated event recorded in the System Event Log (SEL).

If an NVIDIA A10 or A100 GPU is installed or rear HDDs are installed, the 28° C [82.4° F] restriction changes to 25° C [77° F]

Table 7 CPU Suffixes

CPU Suffix	Description	Features
N	Networking Optimized	Optimized for use in networking applications like L3 forwarding, 5G UPF, OVS DPDK, VPP FIB router, VPP IPsec, web server/NGINX, vEPC, vBNG, and vCMTS. SKUs have higher base frequency with lower TDPs to enable best performance/Watt
P	Cloud Optimized	SKU specifically designed for cloud IaaS environments to deliver higher frequencies at constrained TDPs
V	Cloud Optimized	SKUs specifically designed for cloud environments to deliver high rack density and maximize VM/cores per TCO\$
T	High T case	SKUs designed for Network Environment-Building System (NEBS) environments
U	1-socket Optimized	Optimized for targeted platforms adequately served by the cores, memory bandwidth and IO capacity available from a single processor
S	Max SGX enclave size	Supports Max SGX enclave size (512GB) to enhance and protect the most sensitive portions of a workload or service
M	Media and AI optimized	Media, AI and HPC Segment Optimized for lower TDP & higher frequencies delivering better perf/w
Y	Speed Select - Performance Profile	Intel® Speed Select Technology provides the ability to set a guaranteed base frequency for a specific number of cores, and assign this performance profile to a specific application/workload to guarantee performance requirements. It also provides the ability to configure settings during runtime and provide additional frequency profile configuration opportunities.

Supported Configurations

(1) DIMM only configurations:

- Select one or two identical CPUs listed in [Table 6 Available CPUs, page 27](#)

(2) DIMM/PMem Mixed Configurations:

- You must select two identical CPUs listed in [Table 6 Available CPUs, page 27](#)

NOTE: Data center deployment mode without fabric interconnect (HX-DC-no-FI) does not support Intel® Optane™ Persistent Memory (PMem). Refer to [STEP 2](#) for the details

(3) Configurations with NVMe PCIe drives (either all NVMe drives or mixed NVMe/SAS/SATA):

- You must select two identical CPUs listed in [Table 6 Available CPUs, page 27](#)

(4) One-CPU Configuration:

- Choose one CPU from any one of the rows of [Table 6 Available CPUs, page 27](#)
- HX DC supports single socket configuration
- HX DC supports single socket for 12 core and above

NOTE: HXAF240C-M6SN (All NVMe) server node does not support One-CPU Configuration.

(5) Two-CPU Configuration:

- Choose two identical CPUs from any one of the rows of [Table 6 Available CPUs, page 27](#)

NOTE:

- You cannot have two I8351N or two I6314U or I6312U CPUs in a two-CPU configuration.
 - If you configure a server with one I8351N CPU or one I6314U CPU or one I6312U CPU you cannot later upgrade to a 2-CPU system with two of these CPUs.
-

(6) For the HXAF240C-M6SN (All NVMe) server node:

- You must select two identical CPUs listed in [Table 6 Available CPUs, page 27](#).
- Dual socket is required with All NVMe server

Caveats

- The selection of 1 or 2 CPUs depends on the desired server functionality. See the following sections:
 - [STEP 5 SELECT MEMORY, page 32](#)
 - [STEP 6 SELECT DRIVE CONTROLLERS, page 38](#)
 - [STEP 7 SELECT DRIVES, page 39](#)
 - [STEP 8 SELECT HYPERFLEX CONNECTIVITY MODE, page 48](#)

STEP 5 SELECT MEMORY

The available memory main characteristics for the HX240C M6 All NVMe/All Flash/Hybrid Server Nodes are as follows:

- Clock speed: 3200 MHz
- Ranks per DIMM: 1, 2, 4, or 8
- Operational voltage: 1.2 V
- Registered ECC DDR4 DIMMs (RDIMMs), Load-reduced DIMMs (LRDIMMs), or Intel® Optane™ Persistent Memory Modules (PMem).

Memory is organized with eight memory channels per CPU, with up to two DIMMs per channel, as shown in [Figure 8](#).

Figure 8 HX240C M6 All NVMe/All Flash/Hybrid Server Nodes Memory Organization

Select DIMMs and PMem

The available memory DIMMs, PMem and Memory Mode option are listed in [Table 8](#).

HX-DCPMM-MM ⁵	Intel Optane DC Persistent Memory Operational Mode - Memory		

Notes:

- 256 GB DIMM is available on HX240M6 server models, with the exclusion of HX240M6 LFF model.
- 256 GB DIMMs cannot be combined with GPU cards, and the ambient temperature shall be limited to a maximum of 28°C.
- Any empty DIMM slot must be populated with a DIMM blank to maintain proper cooling airflow.
- App Direct Mode:** PMem operates as a solid-state disk storage device. Data is saved and is non-volatile. Both PMem and DIMM capacities count towards the CPU capacity limit.
- Memory Mode:**
 - Please note that DCPMM - Memory mode configuration is on compliance hold review. Please contact: hxdcpmm_compliancehold@cisico.com
 - Please use the [HX M6 Memory Guide](#) to determine the correct DRAM:DCPMM ratio

Data Center Deployment Mode

NOTE: Data center deployment mode without fabric interconnect (HX-DC-no-FI) does not support HX-MP-512GS-A0, HX-MP-256GS-A0, HX-MP-128GS-A0, HX-DCPMM-AD and HX-DCPMM-MM. Refer to [STEP 2](#) for the details

**NOTE:**

- System performance is optimized when the DIMM type and quantity are equal for both CPUs, and when all channels are filled equally across the CPUs in the server.
 - The selected DIMMs must be all of same type and number of DIMMs must be equal for both CPUs
 - HyperFlex Data Platform reserves memory for each controller VM. Refer to the <[Install Guide](#)> for reservation details.
 - The memory mirroring feature is not supported with HyperFlex nodes.
-

Memory Configurations, Features, and Modes

System speed is dependent on the CPU DIMM speed support. Refer to [Available CPUs, page 27](#) for DIMM speeds.

- The server supports the following memory reliability, availability, and serviceability (RAS) BIOS options (only one option can be chosen):
 - Adaptive Double Device Data Correction (ADDDC) (default)
 - Maximum performance
- For best performance, observe the following:
 - When one DIMM is used, it must be populated in DIMM slot 1 (farthest away from the CPU) of a given channel.
 - When single- or dual-rank DIMMs are populated in two DIMMs per channel (2DPC) configurations, always populate the higher number rank DIMM first (starting from the farthest slot). For a 2DPC example, first populate with dual-rank DIMMs in DIMM slot 1. Then populate single-rank DIMMs in DIMM 2 slot.
- DIMMs for CPU 1 and CPU 2 (when populated) must always be configured identically.
- Cisco memory from previous generation servers (DDR3 and DDR4) is not compatible with the server.
- Memory can be configured in any number of DIMMs as pairs, although for optimal performance, see the following document
[HX M6 Memory Guide](#)

Approved Configurations

(1) 1-CPU configuration:

- Select from 1 to 16 DIMMs
 - 1, 2, 4, 6, 8, 12, or 16 DIMMs allowed
 - 3, 5, 7, 9, 10, 11, 13, 14, 15 DIMMs not allowed
 - DIMMs for both CPUs must be configured identically.

The DIMMs will be placed by the factory as shown in the following table.

#DIMMs	CPU 1 DIMM Placement in Channels (for identically ranked DIMMs)
1	(A1)
2	(A1, E1)
4	(A1, C1); (E1, G1)

16	(A1, B1); (C1, D1); (E1, F1); (G1, H1); (A2, B2); (C2, D2); (E2, F2); (G2, H2)

(2) 2-CPU configuration:

- Select from 1 to 16 DIMMs per CPU
 - 1, 2, 4, 6, 8, 12, or 16 DIMMs allowed
 - 3, 5, 7, 9, 10, 11, 13, 14, 15 DIMMs not allowed
 - DIMMs for both CPUs must be configured identically.

The DIMMs will be placed by the factory as shown in the following table.

#DIMMs	CPU 1 DIMM Placement in Channels (for identically ranked DIMMs)	CPU 2 DIMM Placement in Channels (for identically ranked DIMMs)

DIMM Rules

- Allowed DIMM count for 1 CPU:
 - Minimum DIMM count = 1; Maximum DIMM count = 16
 - 1, 2, 4, 6, 8, 12, or 16 DIMMs allowed
 - 3, 5, 7, 9, 10, 11, 13, 14, or 15 DIMMs not allowed.
- Allowed DIMM count for 2 CPUs:
 - Minimum DIMM count = 2; Maximum DIMM count = 32
 - 2, 4, 8, 12, 16, 24, or 32 DIMMs allowed
 - 6, 10, 14, 18, 20, 22, 26, 28, or 30 DIMMs not allowed.
- DIMM Mixing:
 - Mixing different types of DIMM (RDIMM with any type of LRDIMM or 3DS LRDIMM with non-3DS LRDIMM) is not supported within a server.
 - Mixing RDIMM with RDIMM types is allowed if they are mixed in same quantities, in a balanced configuration.
 - Mixing 16 GB, 32 GB, and 64 GB RDIMMs is supported.
 - 128 GB and 256 GB LRDIMMs cannot be mixed with other RDIMMs
 - 128 GB non-3DS LRDIMMs cannot be mixed with 256 GB 3DS LRDIMMs

**NOTE:**

- DIMM mixing is not allowed when PMem are installed; in these cases, all DIMMs must be the same type and size.
 - See the detailed mixing DIMM configurations at the following link
[HX M6 Memory Guide](#)

STEP 6 SELECT DRIVE CONTROLLERS

The following list summarizes how drives are controlled on the server:

- SAS/SATA drives are controlled through one or two Cisco 12G SAS pass-through HBAs.
- PCIe drives are controlled directly from the CPUs.

NOTE: Drive Controller are not supported in HXAF240C-M6SN (All NVMe) server node.

Cisco 12G SAS HBA

This HBA supports up to 16 SAS or SATA drives (HX240C-M6SX and HXAF240C-M6SX servers has 24 front drives and 2 or 4 rear drives) operating at 3 Gbs, 6 Gbs, and 12Gbs. It supports JBOD or pass-through mode (not RAID) and plugs directly into the drive backplane. Two of these controllers are required to control 24 front drives and 2 or 4 rear drives.

Select Drive Controller Options

Select the following:

- Cisco 12G SAS HBA (see [Table 10](#)).

Table 10 Hardware Controller Options

Product ID (PID)	PID Description
Controllers for Internal Drives	
Note that if a Cisco 12G SAS HBA is selected, it is factory-installed in the drive backplane connector.	
HX-SAS-240M6 ¹	Cisco 12G SAS HBA (for All Flash and Hybrid server nodes) <ul style="list-style-type: none"> ■ Supports up to 16 internal SAS HDDs and SAS/SATA SSDs ■ Supports JBOD or pass-through mode

Notes:

1. Two of these controllers are required to control 24 front drives and four rear drives.

Approved Configurations

The HX240C M6 All NVMe/All Flash/Hybrid Server Nodes can be ordered as follows:

- HXAF240C-M6SN (24-drive NVMe (only) drives)
- HXAF240C-M6SX (24-drive SAS/SATA backplane and optionally 4 of those can be NVMe)
- HX240C-M6SX (24-drive SAS/SATA backplane)
- There is no RAID support for NVMe drives.

STEP 7 SELECT DRIVES

The standard disk drive features are:

- 2.5-inch small form factor
- Hot-pluggable
- Drives come mounted in sleds

Select Drives - HXAF240C-M6SN (All NVMe)

The available drives are listed in [Table 11](#).

Data Center Deployment Mode

NOTE: HX Data Center without Fabric Interconnect (DC-no-FI) All NVMe - HXAF240C-M6SN require HXDP 5.0(1b) or higher.

* NOTE:

- HX 5.0(2b) supports the ability to handle inter-operability of mixed cache drives on HyperFlex All NVMe clusters with certain hardware configurations:
 - Existing cluster with 375G cache can be expanded with 1.6TB cache.
 - New cluster creation with heterogeneous cache drives needs two-step approach for a minimum of 4 node cluster; (Step 1) cluster creation with minimum three of lesser capacity 375GB cache, (Step 2) cluster expansion with 1.6TB cache. New heterogeneous cluster with less than three 375GB cache is not supported; Upgrade to homogenous cluster with 1.6TB cache is recommended in this scenario.
- For expansion of existing clusters or general information about interoperability of different drives, see [Cisco HyperFlex Drive Compatibility](#).

Approved Configurations

- Capacity drive:
 - **I/O Centric:** Six to twenty-two front capacity drives
 - **Storage Centric:** Six to twenty-four (twenty-two front + two rear) capacity drives
-

**NOTE:**

- For cluster scale related information please see the product [release notes](#).
-

- One cache drive
 - One system drive
 - Boot drive:
-

**NOTE:**

- Order two identical M.2 SATA SSDs for the boot-optimized RAID controller. You cannot mix M.2 SATA SSD capacities.
 - It is recommended that M.2 SATA SSDs be used as boot-only devices.
 - The Boot-Optimized RAID controller supports VMWare, Windows and Linux Operating Systems.
 - CIMC/UCSM is supported for configuring of volumes and monitoring of the controller and installed SATA M.2 drives.
 - The minimum version of Cisco IMC and Cisco UCS Manager that supports this controller is 4.2(1) and later. The name of the controller in the software is MSTOR-RAID
 - The SATA M.2 drives can boot in UEFI mode only. Legacy boot mode is not supported.
 - Hot-plug replacement is not supported. The server must be powered off.
 - The boot-optimized RAID controller is supported when the server is used as a compute node in HyperFlex configurations.
 - See [Figure 16 on page 83](#) for the location of the module connector on the motherboard. This connector accepts the boot-optimized RAID controller.
-

Caveats

- **SED** drives are not supported with HXAF240C-M6SN (All NVMe) server node.
- **SFF NVMe** drives are connected directly to CPU2, and are not managed by any drive controller.

Select Drives - HXAF240C-M6SX (All Flash)

The available drives are listed in [Table 12](#).

Data Center Deployment Mode

NOTE: Data center deployment mode without fabric interconnect (HX-DC-no-FI) does not support SED drives. Refers to [STEP 2](#) for the details.

* NOTE:

- HX 5.0(2b) supports the ability to handle inter-operability of mixed cache drives on HyperFlex All Flash clusters with certain hardware configurations:
 - Existing cluster with 375G cache can be expanded with 1.6TB cache.
 - New cluster creation with heterogeneous cache drives needs two-step approach for a minimum of 4 node cluster; (Step 1) cluster creation with minimum three of lesser capacity 375GB cache, (Step 2) cluster expansion with 1.6TB cache. New heterogeneous cluster with less than three 375GB cache is not supported; Upgrade to homogenous cluster with 1.6TB cache is recommended in this scenario.
- For expansion of existing clusters or general information about interoperability of different drives, see [Cisco HyperFlex Drive Compatibility](#).

NOTE: Cisco uses solid state drives (SSDs) from a number of vendors. All solid state drives (SSDs) are subject to physical write limits and have varying maximum usage limitation specifications set by the manufacturer. Cisco will not replace any solid state drives (SSDs) that have exceeded any maximum usage specifications set by Cisco or the manufacturer, as determined solely by Cisco.			

Approved Configurations

- Capacity drive:
 - I/O Centric: Six to twenty-two front capacity drives
 - Storage Centric: Six to twenty-six (twenty-two front + four rear) capacity drive
 - DC-no-FI: Both I/O Centric and Storage Centric is supported
-

NOTE:

- Rear drives can only be selected once after the front drive slots are filled.
 - Less than six capacity drives is supported only for HX Edge configuration.
 - For cluster scale related information please see the product [release notes](#).
-

- One cache drive
-

NOTE:

- SED cache drive can only be selected, if you have selected SED capacity drive
 - When configuring front facing drives with NVMe drives, you must order an NVMe cable (PID = CBL-FNVMe-240M6) along with the drives.
-

- One system drive
 - One boot drive
-

NOTE:

- Order two identical M.2 SATA SSDs for the boot-optimized RAID controller. You cannot mix M.2 SATA SSD capacities.
 - It is recommended that M.2 SATA SSDs be used as boot-only devices.
 - The Boot-Optimized RAID controller supports VMWare, Windows and Linux Operating Systems.

STEP 8 SELECT HYPERFLEX CONNECTIVITY MODE

Starting with HyperFlex 5.0(2a), the following two Connectivity options are supported

Select Connectivity mode

The available connectivity modes are listed in [Table 14](#)

Table 14 Connectivity Modes

Product ID (PID)	Description
HX-VIC-MODE	Hyperflex VIC Connectivity Mode
HX-NIC-MODE ¹	Hyperflex NIC Connectivity Mode

Notes:

1. Selection of Deployment Mode Option (HX-DC-NO-FI) is required for the NIC Connectivity Mode. Minimum 4 NIC Ports required, If NIC mode is selected and Double-Wide GPU is selected from R2 Slot5 x16, then must select quad port PID from R2 Slot 4 x8 PCIe NIC option and cannot make selection from R2 Slot 6 x8 PCIe NIC Option.

Table 15 Available Cards for the Connectivity Modes

Product ID (PID)	Description
HyperFlex VIC Connectivity Mode	
HX-M-V25-04	Cisco UCS VIC 1467 quad port 10/25G SFP28 mLOM

HX-P-I8Q25GF	Cisco-Intel E810XXVDA4L 4x25/10 GbE SFP28 PCIe NIC

STEP 9 SELECT OPTION CARD(S)

The standard PCIe card offerings are:

- Modular LAN on Motherboard (mLOM)
- Virtual Interface Cards (VICs)
- Network Interface Cards (NICs)

Select Option Cards

The available option cards are listed in [Table 16](#)

Data Center Deployment Mode

NOTE:

- Data center deployment mode without fabric interconnect (HX-DC-no-FI) does not support HX-PCIE-C25Q-04 and HX-PCIE-OFFLOAD-1. Refer to [STEP 2](#) for the details.
- HX-M-V100-04 require HXDP 4.5(2c) or higher for data center deployment mode without fabric interconnect (DC-no-FI).

Table 16 Available PCIe Option Cards

Product ID (PID)	PID Description	Location	Card Size ¹
Virtual Interface Card (VICs)			
HX-PCIE-C100-04	Cisco UCS VIC 1495 dual port 40/100G QSFP28 CNA PCIe	Riser 1 or 2	HHHL, SS
HX-PCIE-C25Q-04	Cisco UCS VIC 1455 quad port 10/25G SFP28 PCIe	Riser 1 or 2	HHHL, SS
Network Interface Cards (NICs)			
1 Gb NICs			
HX-PCIE-IRJ45	Intel i350 quad port 1G copper PCIe	Riser 1, 2, or 3	HHHL, SS
10 Gb NICs			
HX-PCIE-ID10GF	Intel X710-DA2 dual port 10Gb SFP+ NIC	Riser 1, 2, or 3	HHHL, SS
HX-PCIE-IQ10GF	Intel X710 quad port 10G SFP+ NIC	Riser 1, 2, or 3	HHHL, SS
HX-P-ID10GC	Cisco-Intel X710T2LG 2x10 GbE RJ45 PCIe NIC	Riser 1, 2, or 3	HHHL, SS
25 Gb NICs			
HX-P-I8D25GF	Cisco-Intel E810XXVDA2 2x25/10 GbE SFP28 PCIe NIC	Riser 1, 2, or 3	HHHL, SS
HX-P-I8Q25GF	Cisco-Intel E810XXVDA4L 4x25/10 GbE SFP28 PCIe NIC	Riser 1, 2, or 3	FHHL, SS
HX PCIe Accel Engine^{2,3}			
HX-PCIE-OFFLOAD-1	Application Acceleration Engine	Riser 1, 2, or 3	HHHL, SS

Notes:

1. HHHL = half-height, half-length; FHHL = full-height, half-length; S = single-slot; DS = double-slot

2. • Every node in an HX cluster must use HX-PCIE-OFFLOAD-1 card
 - Optional card offloads the compression functionality to HW acceleration card. HX-PCIE-OFFLOAD-1 uses a more computationally intensive compression algorithm. This results in lower storage space and frees up CPU cycle.
 - HXDP Enterprise licenses are required.
 - HX-PCIE-OFFLOAD-1 works with all HXDP features, including Stretched Cluster, SED drives and more
3. Please note that, HX-PCIE-OFFLOAD-1 is on Compliance Hold Review, for details contact: hx-order-compliance-hold@cisco.com

NOTE: Use of 10GE PCI card is not allowed with 6300 Series FI.

Caveats

- For 1-CPU systems:
 - Only PCIe slots 1, 2, and 3 on PCIe riser 1A are available for a 1-CPU system.
 - The PCIe slots on riser 2 are not supported on 1-CPU systems. The riser 2 slots are full-height PCIe slots 4, 5, and 6 (see [Figure 5 on page 12](#)). These are the slots in the middle when looking at the rear of the server. Slot 4 is the bottom slot.
 - The PCIe slots on riser 3 are not supported on 1-CPU systems. The riser 3 slots are full-height PCIe slots 7 and 8 (see [Figure 5 on page 12](#)). These are the slots on the right when looking at the rear of the server. Slot 7 is the bottom slot.
 - Only a single plug-in PCIe VIC card may be installed on a 1-CPU system, and it must be installed in slots 1, 2, or 3 of riser 1A.
 - You can order an mLOM VIC card to be installed in the mLOM slot internal to the chassis. You can also have a PCIe VIC in slot 2 and thus have a PCIe VIC and one mLOM VIC in operation at the same time. If you order a double-width GPU, it must be installed in slot 2; then a PCIe VIC can be installed in slot 1. See [Table 20 on page 55](#). See [Table 16 on page 49](#) for the selection of plug-in and mLOM VIC cards. See also [Table 1 on page 19](#) and [SPARE PARTS, page 93](#) for the PCIe slot physical descriptions.
- For 2-CPU systems:
 - The following PCIe slots are available:
 - Three on PCIe riser 1A (PCIe slots 1, 2, and 3),
 - Three on PCIe riser 2A (PCIe slots 4, 5, and 6),
 - Two on PCIe riser 3A (PCIe slots 7 and 8).
 - You can order an mLOM VIC card to be installed in the mLOM slot internal to the chassis. You can also have PCIe VICs in slot 2 and slot 5 and thus have two PCIe VICs and one mLOM VIC in operation at the same time. If you order a double width GPU, it must be installed in slots 2, 4 or 7; then two PCIe VIC can be installed in slot 1 and slot 4. See [Table 16 on page 49](#) for the selection of plug-in and mLOM VIC cards. See also [Table 1 on page 19](#) and [SPARE PARTS, page 93](#) for the PCIe slot physical descriptions.

- If GPUs are installed in slot 2 of riser 1A or slot 5 of riser 2A, the NCSI capability automatically switches over to slot 1 of riser 1A or slot 4 of Riser 2A. Therefore, Cisco PCIe VICs can be installed in slots 1 and 4 if GPUs are installed in slots 2 and 5. If you order multiple GPUs, they must be installed as shown in [Table 20 on page 55](#).

NOTE: UCSM managed servers are discoverable only if a PCIe VIC is installed or a VIC is installed in the MLOM slot.

- The server supports up to two PCIe Cisco VICs plus an MLOM VIC

However, single wire management is supported on only one VIC at a time. If multiple VICs are installed on a server, only one slot has NCSI enabled at a time and for single wire management, priority goes to the MLOM slot, then slot 2, then slot 5 for NCSI management traffic. When multiple cards are installed, connect the single wire management cables in the priority order mentioned above.

- To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the HX240C M6 All NVMe/All Flash/Hybrid server, but are not sold on the Cisco price list, check the Hardware Compatibility List at this URL:
http://www.cisco.com/en/US/products/ps10477/prod_technical_reference_list.html

STEP 10 ORDER OPTIONAL PCIe OPTION CARD ACCESSORIES

- For list of supported optics and cables for VIC 1455, VIC 1495, VIC 1467 and 1477, refer to the VIC 1400 series data sheets at the following links:

STEP 11 ORDER GPU CARDS (OPTIONAL)

NOTE: When a GPU is ordered, the server comes with low-profile heatsinks PID (HX-HSLP-M6=) and need to select special air duct PID (HX-ADGPU-245M6=) for double-wide GPUs.

Select GPU Options

The available GPU PCIe options and their riser slot compatibilities are listed in [Table 20](#)

Table 20 Available PCIe GPU Cards¹

GPU Product ID (PID)	PID Description	Card Size	Max GPU per Node	Riser Slot Compatibility					
				Riser 1A (Gen 4)	Riser 1B ²	Riser 2 (Gen 4)	Riser 3A ³ Gen 4)	Riser 3B ⁴	Riser 3C ^{5,6}

Notes:

1. Refer to [installation guide](#) for the GPU related information
2. Riser 1B does not accept GPUs
3. Riser 3A does not accept GPUs
4. Riser 3B does not accept GPUs
5. The server supports one full-height, full-length, double-wide GPU (PCIe slot 7 only) in Riser 3C.
6. All NVMe server does not support riser 3C

**NOTE:**

- All NVMe server does not support riser 3
 - All GPU cards must be procured from Cisco as there is a unique SBIOS ID required by CIMC and UCSM.
 - If you are adding GPUs later, please refer to [SPARE PARTS, page 93](#) section of the below spec sheet to find the accessories/cables needed along with the GPU spare.
 - Please refer to [installation guide](#) for the GPU related information.
 - GPUs cannot be mixed.

STEP 12 ORDER POWER SUPPLY

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M6 HX-Series servers. Each power supply is certified for high-efficiency operation and offer multiple power output options. This allows users to “right-size” based on server configuration, which improves power efficiency, lower overall energy costs and avoid stranded capacity in the data center. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

<http://ucspowercalc.cisco.com>

WARNING:

- Starting 1st January 2024, only Titanium rated PSUs are allowed to be shipped to European Union (EU), European Economic Area (EEA), United Kingdom (UK), Switzerland and other countries that adopted Lot 9 Regulation.
- DC PSUs are not impacted by Lot 9 Regulation and are EU/UK Lot 9 compliant

Table 21 Power Supply

HX-PSU1-2300W	2300W AC Power Supply for Rack Servers Titanium
HX-PSU1-1050ELV	1050W AC PSU Enhanced Low Line (Not EU/UK Lot 9 Compliant)

Notes:

1. The 2300 W power supply uses a different power connector than the rest of the power supplies, so you must use different power cables to connect it. See [Table 22 on page 58](#) and [Table 23 on page 61](#).

NOTE: In a server with two power supplies, both power supplies must be identical.

STEP 13 SELECT INPUT POWER CORD(S)

Using [Table 22](#) and [Table 23](#), select the appropriate AC power cords. You can select a minimum of no power cords and a maximum of two. If you select the option R2XX-DMYPWRCORD, no power cord is shipped with the server.

NOTE: [Table 22](#) lists the power cords for servers that use power supplies less than 2300 W. [Table 23](#) lists the power cords for servers that use 2300 W power supplies. Note that the power cords for 2300 W power supplies use a C19 connector so they only fit the 2300 W power supply connector.

STEP 14 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM

Select a Tool-less Rail Kit

Select a tool-less rail kit (or no rail kit) from [Table 24](#).

Table 24 Tool-less Rail Kit Options

Product ID (PID)	PID Description
HX-RAIL-M6	Ball Bearing Rail Kit for C220 & C240 M6 rack servers
HX-RAIL-NONE	No rail kit option

NOTE: Cisco recommends a minimum quantity of 1 Rail Kit.

Select an Optional Reversible Cable Management Arm

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Use [Table 25](#) to order a cable management arm.

Table 25 Cable Management Arm

Product ID (PID)	PID Description
HX-CMA-C240M6	Reversible CMA for C240 M6 ball bearing rail kit

For more information about the tool-less rail kit and cable management arm, see the Cisco server Installation and Service Guide at this URL:

https://www.cisco.com/content/en/us/td/docs/unified_computing/ucs/c/hw/c240m6/install/c240m6.html

NOTE: If you plan to rackmount your HyperFlex HX240C M6 All NVMe/All Flash/Hybrid Server Nodes, you must order a tool-less rail kit. The same rail kits and CMAs are used for M5 and M6 servers.

STEP 15 ORDER SECURITY DEVICES (OPTIONAL)

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server.

The security device ordering information is listed in [Table 26](#).

Table 26 Security Devices

Product ID (PID)	PID Description
HX-TPM-002C	TPM 2.0, TCG, FIPS140-2, CC EAL4+ Certified, for M6 servers
HX-INT-SW02	C220 and C240 M6 Chassis Intrusion Switch
UCSX-TPM-OPT-OUT	OPT OUT, TPM 2.0, TCG, FIPS140-2, CC EAL4+ Certified ¹

Notes:

1. Please note that Microsoft certification requires a TPM 2.0 for bare-metal or guest VM deployments. Opt-out of the TPM 2.0 voids the Microsoft certification

NOTE:

- The TPM module used in this system conforms to TPM 2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.
- TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.

STEP 16 SELECT LOCKING SECURITY BEZEL (OPTIONAL)

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel from [Table 27](#).

Table 27 Locking Bezel Option

Product ID (PID)	Description
HXAF240C-BZL-M5SN	HXAF240C M5 All NVMe Security Bezel

STEP 17 SELECT HOST OPERATING SYSTEM

Select Microsoft Windows operating system as desired from [Table 28](#)

NOTE:

- **VMware ESXi Hypervisor** - We no longer ship VMWare ESXi from the factory. Refer to this link for the further details.
https://www.cisco.com/c/en/us/td/docs/hyperconverged_systems/HyperFlex_HX_DataPlatformSoftware/BroadcomAgreementNotice/b-broadcom-terminated-vmware-embedded-agreement.html
- **Microsoft operating system** - Optional guest OS licenses that may be purchased to run on top of the hypervisor.

STEP 21 SELECT SERVICE and SUPPORT LEVEL

A variety of service options are available, as described in this section.

HyperFlex Warranty, No Contract

If you have noncritical implementations and choose to have no service contract, the following coverage is supplied:

- Three-year parts coverage.
- Next business day (NBD) onsite parts replacement eight hours a day, five days a week.
- 90-day software warranty on media.
- Ongoing downloads of BIOS, drivers, and firmware updates.
- UCSM updates for systems with Unified Computing System Manager. These updates include minor enhancements and bug fixes that are designed to maintain the compliance of UCSM with published specifications, release notes, and industry standards.

Smart Net Total Care (SNTC)

For support of the entire HyperFlex System, Cisco offers the Cisco Smart Net Total Care Service. This service provides expert software and hardware support to help sustain performance and high availability of the unified computing environment. Access to Cisco Technical Assistance Center (TAC) is provided around the clock, from anywhere in the world.

For systems that include Unified Computing System Manager, the support service includes downloads of UCSM upgrades. The Cisco Smart Net Total Care Service includes flexible hardware replacement options, including replacement in as little as two hours. There is also access to Cisco's extensive online technical resources to help maintain optimal efficiency and uptime of the unified computing environment. For more information please refer to the following url: <http://www.cisco.com/c/en/us/services/technical/smart-net-total-care.html?stickynav=1>

Solution Support (SSPT)

Solution Support includes both Cisco product support and solution-level support, resolving complex issues in multivendor environments, on average, 43% more quickly than product support alone. Solution Support is a critical element in data center administration, to help rapidly resolve any issue encountered, while maintaining performance, reliability, and return on investment.

This service centralizes support across your multivendor Cisco environment for both our products and solution partner products you’ve deployed in your ecosystem. Whether there is an issue with a Cisco or solution partner product, just call us. Our experts are the primary point of contact and own the case from first call to resolution. For more information please refer to the following url:

Smart Net Total Care Hardware Only Service

For faster parts replacement than is provided with the standard Cisco HyperFlex warranty, Cisco offers the Cisco Smart Net Total Care Hardware Only Service. You can choose from two levels of advanced onsite parts replacement coverage in as little as four hours. Smart Net Total Care Hardware Only Service provides remote access any time to Cisco support professionals who can determine if a return materials authorization (RMA) is required.

You can choose a desired service listed in [Table 36](#).

Partner Support Service

Cisco Partner Support Service (PSS) is a Cisco Collaborative Services service offering that is designed for partners to deliver their own branded support and managed services to enterprise customers. Cisco PSS provides partners with access to Cisco's support infrastructure and assets to help them:

- Expand their service portfolios to support the most complex network environments
- Lower delivery costs
- Deliver services that increase customer loyalty

PSS options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco intellectual assets. This helps partners to realize higher margins and expand their practice.

PSS is available to all Cisco PSS partners.

The two Partner Support Options include:

- Partner Support Service for HyperFlex
- Partner Support Service for HyperFlex Hardware Only

PSS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support.

You can choose a desired service listed in [Table 37](#).

Combined Support Service

Combined Services makes it easier to purchase and manage required services under one contract. SNTC services help increase the availability of your vital data center infrastructure and realize the most value from your unified computing investment. The more benefits you realize from the Cisco HyperFlex System, the more important the technology becomes to your business. These services allow you to:

- Optimize the uptime, performance, and efficiency of your HyperFlex system
- Protect your vital business applications by rapidly identifying and addressing issues
- Strengthen in-house expertise through knowledge transfer and mentoring
- Improve operational efficiency by allowing HyperFlex experts to augment your internal staff resources
- Enhance business agility by diagnosing potential issues before they affect your operations

You can choose a desired service listed in [Table 40](#).

Drive Retention Service

With the Cisco Drive Retention Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The Drive Retention service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in the above tables (where available)

NOTE: Cisco does not offer a certified drive destruction service as part of this service.

Local Language Technical Support

Where available, and subject to an additional fee, local language support for calls on all assigned severity levels may be available for specific product(s) - see tables above.

SUPPLEMENTAL MATERIAL

Hyperconverged Systems

Cisco HyperFlex Systems let you unlock the full potential of hyperconvergence and adapt IT to the needs of your workloads. The systems use an end-to-end software-defined infrastructure approach, combining software-defined computing in the form of Cisco HyperFlex HX-Series nodes; software-defined storage with the powerful Cisco HX Data Platform; and software-defined networking with the Cisco UCS fabric that will integrate smoothly with Cisco Application Centric Infrastructure (Cisco ACI). Together with a single point of connectivity and management, these technologies deliver a preintegrated and adaptable cluster with a unified pool of resources that you can quickly deploy, adapt, scale, and manage to efficiently power your applications and your business.

Figure 9 & Figure 10 show a small footprint cluster.

10 or 25 Gigabit Ethernet Dual Switch Topology

Dual switch configuration provides a slightly more complex topology with full redundancy that protects against: switch failure, link failure, and port failure. It requires two switches that may be standalone or stacked, and two 10/25GE ports, one 1GE port for CIMC management, and one Cisco VIC 1467 per server. Trunk ports are the only supported network port configuration. refer [10/25 Gigabit Ethernet Switch Configuration Guidelines](#) for more information.

To deploy this topology, select connectivity mode from [Table 14](#).

Dual switch configuration provides a slightly more complex topology with full redundancy that protects against: switch failure, link failure, and port failure. It requires two switches that may be standalone or stacked, and four 10/25GE ports, one 1GE port for CIMC management, and 1 x quad port NIC per server. Trunk ports are the only supported network port configuration. refer [10/25 Gigabit Ethernet Switch Configuration Guidelines](#) for more information.

SPARE PARTS

This section lists the upgrade and service-related parts for the HyperFlex HX240C M6 All NVMe/All Flash/Hybrid Server Nodes. Some of these parts are configured with every server.

NOTE: Some spare parts you order may also require accessories for full functionality. For example, drives or RAID controllers may need accompanying cables. CPUs may need heatsinks, thermal paste, and installation tools. The spares and their accessory parts are listed in [Table 42](#).

Notes:

1. This part is included with the purchase of option or spare CPU or CPU processor kits.
2. Order an extender board and two matching M.2 SATA SSDs along with a boot-optimized RAID controller (see [STEP 7 SELECT DRIVES](#)). See [Figure 16 on page 83](#) for the location of the extender board connector on the motherboard. The motherboard extender board connector accepts the extender board and the extender board accepts the boot-optimized RAID controller.

UPGRADING or REPLACING CPUs

NOTE: Before servicing any CPU, do the following:

- Decommission and power off the server.
- Slide the HX240C M6 All NVMe/All Flash/Hybrid Server Nodes out from the rack.
- Remove the top cover.

To replace an existing CPU, follow these steps:

(1) Have the following tools and materials available for the procedure:

- T-30 Torx driver—Supplied with replacement CPU.
- #1 flat-head screwdriver—Supplied with replacement CPU.
- CPU assembly tool—Supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPUAT=.
- Heatsink cleaning kit—Supplied with replacement CPU. Can be ordered separately as Cisco PID UCSX-HSCK=.
- Thermal interface material (TIM)—Syringe supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPU-TIM=.

(2) Order the appropriate replacement CPU from [Table 6 on page 27](#):

Carefully remove and replace the CPU and heatsink in accordance with the instructions found in “M5 server Installation and Service Guide” found at:

https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C240M5/install/C240M5/C240M5_chapter_010.html?bookSearch=true#concept_bfk_kwp_hz

To add a new CPU, follow these steps:

(1) Have the following tools and materials available for the procedure:

- T-30 Torx driver—Supplied with new CPU.
- #1 flat-head screwdriver—Supplied with new CPU
- CPU assembly tool—Supplied with new CPU. Can be ordered separately as Cisco PID UCS-CPUAT=
- Thermal interface material (TIM)—Syringe supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPU-TIM=

(2) Order the appropriate new CPU from [Table 6 on page 27](#)

(3) Order one heat sink for each new CPU. Order PID UCSC-HSHP-240M6= for servers with no GPU. Order PID UCSC-HSLP-M6= for servers with GPUs.

Carefully install the CPU and heatsink in accordance with the instructions found in “M5 server Installation and Service Guide,” found at:

https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C240M5/install/C240M5/C240M5_chapter_010.html?bookSearch=true#concept_bfk_kwp_hz

UPGRADING or REPLACING MEMORY

NOTE: Before servicing any DIMM or PMem, do the following:

- Decommission and power off the server.
- Remove the top cover from the server
- Slide the server out the front of the chassis.

To add or replace DIMMs or PMem, follow these steps:

Step 1 Open both DIMM connector latches.

Step 2 Press evenly on both ends of the DIMM until it clicks into place in its slot

Note: Ensure that the notch in the DIMM aligns with the slot. If the notch is misaligned, it is possible to damage the DIMM, the slot, or both.

Step 3 Press the DIMM connector latches inward slightly to seat them fully.

Step 4 Populate all slots with a DIMM or DIMM blank. A slot cannot be empty.

Figure 26 Replacing Memory

For additional details on replacing or upgrading DIMMs and PMem, see “Cisco M5 Server Installation and Service Guide” found at this link:

Power Specifications

The server is available with the following types of power supplies:

- 1050 W (AC) power supply (see [Table 44](#)).
- 1050 W V2 (DC) power supply (see [Table 45](#))
- 1600 W (AC) power supply (see [Table 46](#))
- 2300 W (AC) power supply (see [Table 47](#))

Environmental Specifications

The environmental specifications for the HX240C M6 All NVMe/All Flash/Hybrid Server Nodes are listed in [Table 48](#).

Table 48 Environmental Specifications

Parameter	Minimum
Operating Temperature	<p>Dry bulb temperature of 10°C to 35°C (50°F to 95°F)</p> <p>Maximum temperature change of 20°C (36°F) per hour (a temperature change within a specified period of time and not a rate of change)</p> <p>Humidity condition: Uncontrolled, not to exceed 50% RH starting condition</p> <p>Derate the maximum temperature by 1°C (33.8°F) per every 305 meters of altitude above 900m</p>
Extended Operating Temperature	<p>5°C to 40°C (41°F to 104°F) with no direct sunlight</p> <p>Humidity condition: Uncontrolled, not to exceed 50% RH starting condition</p> <p>Derate the maximum temperature by 1°C (33.8°F) per every 305 meters of altitude above 900m</p>
Non-Operating Temperature	Dry bulb temperature of -40°C to 65°C (-40°F to 149°F)
Operating Relative Humidity	<p>10% to 90% and 28°C (82.4°F) maximum dew-point temperature, non-condensing environment</p> <p>Minimum to be higher (more moisture) of -12°C (10.4°F) dew point or 8% relative humidity</p> <p>Maximum to be 24°C (75.2°F) dew point or 90% relative humidity</p>
Non-Operating Relative Humidity	5% to 93% relative humidity, non-condensing, with a maximum wet bulb temperature of 28°C across the 20°C to 40°C dry bulb range.
Maximum Operating Duration	Unlimited
Operating Altitude	A maximum elevation of 3050 meters (10,006 ft)
Non-Operating Altitude	An elevation of 0 to 12,000 meters (39,370 ft)
Sound Power level, Measure A-weighted per ISO7779 LWAd (Bels) Operation at 23°C (73°F)	5.5
Sound Pressure level, Measure A-weighted per ISO7779 LpAm (dBA) Operation at 23°C (73°F)	40
