/**
* Interface for accessing Agreement Service asynchronously. Each asynchronous method will return a Java Future
object
```

\* representing the asynchronous operation; overloads which accept an {@code AsyncHandler} can be used to receive notification when an asynchronous operation completes.

\* **Note:** Do not directly implement this interface, new methods are added to it regularly. Extend from `com.amazonaws.services.marketplaceagreement.AbstractAWSMarketplaceAgreementAsync` instead.

\* AWS Marketplace is a curated digital catalog that customers can use to find, buy, deploy, and manage third-party software, data, and services to build solutions and run their businesses. The AWS Marketplace Agreement Service provides an API interface that helps AWS Marketplace sellers manage their product-related agreements, including listing, searching, and filtering agreements.

\* To manage agreements in AWS Marketplace, you must ensure that your AWS Identity and Access Management (IAM) policies and roles are set up. The user must have the required policies/permissions that allow them to carry out the actions in AWS:

- \* `DescribeAgreement` – Grants permission to users to obtain detailed meta data about any of their agreements.
- \* `GetAgreementTerms` – Grants permission to users to obtain details about the terms of an agreement.
- \* `SearchAgreements` – Grants permission to users to search through all their agreements.
