The Cisco® ASR 9000 Series Route Switch Processor 5 (ASR 9000 RSP5) is the next-generation system processor for the Cisco ASR 9000 Series Routers. It supports high-density 100 and 400 Gigabit Ethernet line cards and provides backward compatibility with the Cisco ASR 9000 Series third generation family of line cards. The Cisco ASR 9000 Series RSP5 system architecture is designed to accommodate new programmable deployment models and convergence of Layer 2 and Layer 3 services, as required by today's wireline, Data-Center-Interconnect (DCI), and mobile aggregation applications.

The ASR 9000 Series RSP5 brings the time-tested and robust carrier-class capabilities of Cisco IOS® XR Software to the Carrier Ethernet edge. The operating system supports true software process modularity. It also allows each process to run in separate protected memory, including each routing protocol, along with multiple instances of control, data, and management planes supported. The software also supports distributed route processing.

Figure 1.
Cisco ASR 9000 Route Switch Processor 5 - SE

Figure 2.
Cisco ASR 9000 Route Switch Processor 5 - TR

The ASR 9000 Series RSP5 is designed to deliver the high scalability, performance, and fast convergence required for today's and tomorrow's demanding video, cloud, and mobile services. These features provide exceptional scale, service flexibility, and high availability. Some examples include:

- Switch fabric architecture for ASR 9010, ASR 9006, ASR 9904, ASR 9906 as well as hybrid switch fabric architecture along with Cisco ASR 9910 and ASR 9906 Fabric Cards:
 - Distributed switch fabric architecture
 - Uses the integrated switch fabrics located on the RSPs
 - Also uses the switch fabrics located on dedicated switch fabric cards
 - Control of up to seven switch fabrics (two located on the RSP and five on dedicated switch fabric cards) to provide same scalability and high availability as on the Cisco ASR 9922 Router and ASR 9912 Router chassis
 - Multistage, low-latency, non-blocking architecture
 - Service intelligence and traffic prioritization

- Superior network-timing capabilities with support for:
 - Global Positioning System (GPS) via Time of Day (ToD), 10-MHz and 1-PPS interfaces
 - Centralized Building Integrated Timing Supply (BITS)

Route Switch Processor types

The ASR 9000 Series RSP5 is available in service-edge-optimized and packet-transport-optimized models. The service-edge-optimized version offers the higher amount of memory that is essential for large-scale, comprehensive service deployment. Both versions of the route switch processor support service-optimized, as well as transport-optimized, line cards. Different line cards can be mixed on the same chassis, providing maximum design flexibility.

Features and benefits of the ASR 9000 Series RSP5 are listed in Table 1.

Table 1. Features and Benefits of the ASR 9000 Series RSP5 in XR 6.5.15 or Later

Feature	Benefit					
Highly scalable fabric	<ul style="list-style-type: none"> • Designed to support high 1-, 10-, 25- 40- 100- and 400-Gbps port densities • Provides built-in scalability for investment protection 					
Fabric capacity	Control of up to seven switch fabrics (two located on the RSP and five on dedicated switch fabric cards)					
	Offers traffic load balancing simultaneously across up to seven fabrics					
	Switching Capacity	9910 (bps)	9906 (bps)	9010 (bps)	9006 (bps)	9904 (bps)
	Non Redundant per Router	33.6T	16.8T	17.6T	8.8T	8.4T
	N +1 per Router	28.8T	14.4T	8.8T	4.4T	3.6T
	Non Redundant per line card Slot	4.2T	4.2T	2.2T	2.2T	4.2T
N+1 per linecard slot	3.6T	3.6T	1.1T	1.1T	1.8T	
Bidirectional per RSP5 to each linecard slot	600G	600G	1.1T	1.1T	1.8T	
Distributed forwarding-plane architecture	Allows line cards to support independent forwarding for enhanced performance and scale					
Memoryless switch fabric	Provides transparent non-blocking, low-latency packet forwarding					
Virtual output queuing and arbitration	<ul style="list-style-type: none"> • Offers service intelligence with prioritization of traffic (unicast and multicast) • Provides an efficient congestion-management mechanism and avoids problems related to head-of-line blocking 					
Centralized arbiter	Uses an efficient credit mechanism to help ensure transparent switchover with zero packet loss					
IEEE 1588 support	Delivers timing services over the packet network efficiently and reliably					

Feature	Benefit
Two independent clock source connections: BITS and Synchronization Supply Unit (SSU) DTI	Offers redundant, centralized network synchronization support
Two 128GB Solid-State Drives (SSDs)	Allows storing of core dumps and helps reduce the system Mean Time To Repair (MTTR)
Embedded Universal Series Bus (eUSB) memory port	Provides access to onboard Universal Serial Bus (USB) flash-memory devices for software image storing and upgrades
Front-panel external USB 2.0 port	Provides access to USB flash-memory devices for quick software image loading and recovery
Front-panel LEDs	Provides visual indication of route switch processor status (active or standby), power management, and activity on SSD
Management ports	Provides easy access to system console
Processor	8 cores, 1.9 GHz

Table 2 lists all the hardware available for the ASR 9000 Series RSP5.

Product number	Product description
A9K-RSP5-TR	ASR 9000 Series Route Switch Processor 5 for Packet Transport
A9K-RSP5-SE	ASR 9000 Series Route Switch Processor 5 for Service Edge

Table 3 lists the technical specifications for the ASR 9000 Series RSP5.

Table 3. Technical Specifications for Cisco ASR 9000 Series RSP5 Hardware XR 6.5.15 or Later

Technical specifications
<p>Internal Memory</p> <ul style="list-style-type: none"> • Control of up to seven switch fabrics (two located on the RSP and five on dedicated switch fabric cards) • ASR 9000 Series RSP5 for Packet Transport 24GB (product number: A9K-RSP5-TR): 24GB Error-Correcting Code (ECC)-protected DRAM. • ASR 9000 Series RSP5 for Packet Transport 16GB (product number: A9K-RSP5-TR): 16GB ECC-protected DRAM. Field upgradable option to 24GB. • ASR 9000 Series RSP5 for Service Edge 40GB (product number: A9K-RSP5-SE): 40GB ECC-protected DRAM • Solid-state drive: Two 128GB SSDs • 8GB embedded USB • USB 2.0 Type A receptacle

Technical specifications

Timing System

- Timing: Two independent clock source connections

GPS

- ToD (RS-422 and RS-232)
- 1-pps RS-422 or 1.0/2.3 50-ohm RF connector
- 10-MHz in/out 1.0/2.3 50-ohm RF connector

Management

- Two 100/1000BASE-T (RJ-45) LAN management ports
- One console port
- One auxiliary port

Alarms

- Alarm outputs: Critical alarm (CR), Major alarm (MJ), and Minor alarm (MN)

LEDs

- Amber Alarm Cutoff (ACO) and lamp test
- System Synchronization alarm (SYNC)
- GPS
- Fabric-card fault indicator
- SSD

Software

The Cisco ASR 9000 Series Aggregation Services Router delivers superior scale, service flexibility, and high availability into access and aggregation networks. It is powered by Cisco IOS XR Software, an innovative self-healing, distributed operating system designed for always-on operation. Cisco IOS XR Software supports a Software-Maintenance-Update (SMU) capability, which allows bug fixing or even small feature releasing without interrupting existing services. It also supports Field-Programmable Device (FPD) upgrades, which can be used to update Field-Programmable Gate Arrays (FPGAs) and more while systems are running.

Cisco ASR 9000 Series Carrier Ethernet applications include business services such as Layer 2 VPN (L2VPN) and Layer 3 VPN (L3VPN), Internet Protocol Television (IPTV), Content-Delivery Networks (CDNs), and mobile backhaul transport networks. Features supported include Ethernet Services; L2VPN; IPv4, IPv6, and L3VPN; Layer 2 and Layer 3 Multicast; IP over Dense Wavelength-Division Multiplexing (IPoDWDM); SyncE; PTP, Ethernet Operations, Administration, and Management (EOAM) and Multiprotocol Label Switching (MPLS) Operations, Administration, and Management (OAM); Layer 2 and Layer 3 Access Control Lists (ACLs); Hierarchical Quality of Service (H-QoS); Segment Routing (SR), Segment Routing v6 (SRv6), RSVP- and SR-Traffic Engineering; TI-LFA and RSVP-based FRR; EVPN; Multi-Chassis Link Aggregation (MC-LAG); Integrated Routing and Bridging (IRB); Cisco Nonstop Forwarding (NSF) and Nonstop Routing (NSR); Point-to-Multipoint Traffic Engineering (P2MP-TE) and mLDP; Lawful Intercept; Smart Call Home (SCH).

The Cisco ASR 9000 Series Multiservice Edge (MSE) and Ethernet MSE (E-MSE) capabilities allow enterprises to offer powerful business VPN services with strong Service-Level Agreement (SLA) enforcement. Such services typically require simultaneous scale increases across multiple dimensions, for example, the number of

Virtual Route Forwarding (VRF) interfaces, IPv4 and IPv6 route scaling, Bidirectional Forwarding Detection (BFD) sessions, and instances of Border Gateway Protocol (BGP) Cisco NSR interfaces. A Cisco ASR 9000 Series system configuration requiring high multiple-dimensional scale requires the service-edge optimized route switch processor model to support the increased system scale.

Timing synchronization is an integral part of traditional circuit-based networks, so the availability of equivalent functions in next-generation Ethernet-based architectures has quickly become a critical requirement. Cisco ASR 9000 Series chassis have GPS, DTI, and BITS connections on the route switch processor, along with SyncE and PTP support natively on the line cards, which gives mobile providers ample options for time and frequency synchronization. Additionally, the Cisco ASR 9000 Route Switch Processor supplies centralized clocking functions throughout the system, providing consolidated timing distribution and recovery to and from the line cards.

Product specifications

Table 4 provides details about the Cisco ASR 9000 Series RSP5, which supports the Cisco ASR 9000 and ASR 9000 chassis series. Cisco ASR 9000 Series systems are designed with high standards of performance and reliability. They feature the same power and thermal innovations, and they can share line cards for maximum flexibility in your network planning.

Cisco Services for Cisco ASR 9000 Series Route Switch Processors

Through a lifecycle services approach, Cisco delivers comprehensive support to service providers to help them successfully deploy, operate, and optimize their Cisco Prime™ Evolved Programmable Networks. Cisco Services for Cisco ASR 9000 Series Aggregation Services Routers provide the services and proven methodologies that help assure service deployment with substantial return on investment, operational excellence, optimal performance, and high availability. These services are delivered using leading practices, tools, processes, and lab environments developed specifically for Cisco ASR 9000 Series deployments and post-implementation support. The Cisco Services team addresses your specific requirements, mitigates risk to existing revenue-generating services, and helps accelerate time to market for new network services.

For more information about Cisco Services, contact your local Cisco account representative or visit: <https://www.cisco.com/go/spservices>.
