Introduction

Reimagine, Reinforce, Redefine

The Catalyst 9500 Series, including the Catalyst 9500X models, continues to shape the future with continued innovation that helps you reimagine connections, reinforce security and redefine the experience for your hybrid workforce big and small.

Cisco Catalyst 9500 Series switches based on Cisco Unified Access Data Plane (UADP) Application-Specific Integrated Circuit (ASIC) are Cisco's lead fixed enterprise core and aggregation switching platform and as part of the Catalyst 9000 family, are built to transform your network to handle a hybrid world where the workplace is anywhere, endpoints could be anything, and applications are hosted all over the place.

Cisco Catalyst 9500X switch based on Cisco Silicon One Q200 ASIC is purpose built for the next generation core with a programmable pipeline (P4) and is the first network silicon to offer switching capacity up to 12.8 Tbps full duplex in the enterprise. The Q200 ASIC offers high-performance along with full routing and switching capabilities without external memories. This is enabled by internal architecture that includes an on-chip High Bandwidth Memory (HBM). The Catalyst 9500X switch leverages a high- performance multiple core x86 CPU, and is Cisco's leading purpose-built fixed core and edge services enterprise switching platform, built for security, IoT, and cloud.

Cisco Catalyst 9500X switch is the industry's first purpose-built fixed 10, 25, 50, 40, 100, 200 and 400 Gigabit Ethernet switch targeted for the enterprise campus. The Catalyst 9500X switch delivers unmatched forwarding scale (MAC addresses, IP unicast and multicast routes, MPLS labels) and deep buffering for enterprise applications. The Catalyst 9500X models includes non-blocking 50 Gigabit Ethernet Small Form-Factor Pluggable (SFP-56) and non-blocking 400 Gigabit Ethernet Quad Small Form-Factor Pluggable Double Density (QSFP-DD) ports.

Catalyst 9500 Series switches support advanced routing and infrastructure services (such as Multiprotocol Label Switching [MPLS] Layer 2 and Layer 3 VPNs, Multicast VPN [MVPN], and Network Address Translation [NAT]); Cisco Software-Defined Access capabilities (such as a host tracking database, cross-domain connectivity, and VPN Routing and Forwarding [VRF]-aware Locator/ID Separation Protocol [LISP]); and network system virtualization with Cisco StackWise Virtual technology that are critical for their placement in the campus core. The Cisco Catalyst 9500 Series also supports foundational high-availability capabilities such as patching, Cisco Nonstop Forwarding with Stateful Switchover (NSF/SSO), redundant platinum-rated power supplies, and fans, while supporting a wide array of optics. Catalyst 9500 Series switches provide operational choice of Cisco Catalyst Center, or Meraki cloud monitoring.

The foundation of Software-Defined Access

The enterprise network lies at the heart of digital transformation. A network that is open, programmable, integrated, and secure maximizes business agility, allowing new business opportunities to be pursued and captured.

The Cisco Networking Cloud with Software-Defined Access (SD-Access) is the network fabric that powers business. Cisco SD-Access is an open and extensible, software-driven architecture that accelerates and simplifies your enterprise network operations. SD-Access enables policy-based automation from edge to cloud with foundational capabilities.

Product overview

Cisco Catalyst 9500X models

- The Cisco [Silicon One Q200](#) Application-Specific Integrated Circuit (ASIC) is purpose built for the next generation network core + edge switch. It is the first enterprise ASIC to offer speeds up to 12.8 Tbps full duplex with 8 Bpps of forwarding performance, while supporting high-performance and full routing and switching capabilities without external memories.

- The Cisco Silicon One Q200 ASIC is built on 7nm fabrication technology, capable of high performance while maintaining a low power footprint.

- Up to 12.0 Tbps switching capacity with 8 Bpps forwarding rate.

- 80MB of dedicated low-latency buffer, with up to 8GB of HBM buffer for deep packet buffers.

- Up to 28 native nonblocking 40/100 Gigabit Ethernet QSFP28 ports.

- Up to 60 native nonblocking 10/25/50 Gigabit Ethernet SFP56 ports.

- Up to 8 native nonblocking 40/100/200/400 Gigabit Ethernet QSFPDD ports.

- Intel 2.3-GHz x86 CPU with 8 cores and 32-GB of DDR4 memory.

- Up to 960 GB of SSD local storage for container-based application hosting (2x 10G KR ports).

- Flexible routing (IPv4, IPv6, and multicast) tables, Layer 2 tables, ACL tables, and QoS tables.

- ASIC tables for switching scale up to 256K MAC addresses and routing scale up to 2M routes.

- Dual-stack IPv4/IPv6 and dynamic hardware forwarding table allocations, for ease of IPv4-to-IPv6 migration.

- Hardware support for Application Hosting.

- Hardware support for Precision Time Protocol (PTP, IEEE 1588v2) with accurate clock synchronization and sub- microsecond accuracy, suitable for distribution and synchronization of time and frequency.

- Hardware support for line-rate 256-bit 802.1ae MACsec and WAN-MACsec data encryption.

- Hardware support for line-rate 256-bit IKEv2 ESP IPsec data encryption (C9500X-60L4D only).

  - Refer to [Platform Details](#) section for more information.

- Platinum-rated (90% efficient) 1500 Watt AC and/or DC power supplies.

- Field-replaceable, N+1 redundant fan-tray units, with an added flexibility to choose the direction of airflow.

Cisco Catalyst 9500 models

- The [Cisco Unified Access Data Plane (UADP)](#) Application-Specific Integrated Circuit (ASIC) ready for next-generation technologies with its programmable pipeline, microengine capabilities, and template-based, configurable allocation of Layer 2 and Layer 3 forwarding, Access Control Lists (ACLs), and Quality-of-Service (QoS) entries.

- Up to 6.4 Tbps switching capacity with up to 2 Bpps of forwarding performance.

- Up to 36 MB of unified buffer per ASIC.

- Intel 2.4-GHz x86 CPU with up to 120 GB of USB 3.0 or up to 960 GB of SATA SSD storage for container-based application hosting.

- Up to 32 nonblocking 100 Gigabit Ethernet QSFP28 ports.

- Up to 32 nonblocking 40 Gigabit Ethernet QSFP+ ports.

- Up to 48 nonblocking 25 Gigabit Ethernet SFP28 ports.

- Up to 48 nonblocking 10 Gigabit Ethernet SFP+ ports.

- Scalable Layer 3 routing (IPv4, IPv6, and multicast) tables and Layer 2 switching tables.

- Hardware support for Application Hosting (e.g. with Cisco ThousandEyes Enterprise Agent).

- IEEE 802.1ba AV Bridging (AVB) built in to provide a better AV experience through improved time synchronization and QoS.

- Precision Time Protocol (PTP; IEEE 1588v2) provides accurate clock synchronization with sub-microsecond accuracy, making it suitable for distribution and synchronization of time and frequency over the network.

- Support for both static and dynamic NAT and Port Address Translation (PAT).

- Cisco StackWise Virtual technology, a network system virtualization technology that increases operational efficiency and boosts nonstop communications and scaled system bandwidth. Multichassis EtherChannel can be configured across StackWise-Virtual members for high resiliency.

- Platinum-rated (Greater than 90% efficient) AC and/pr DC power supplies.

- Field-replaceable fan-tray units.

- Meraki Cloud monitoring option.

Cisco IOS XE

This modern operating system for the enterprise provides support for model-driven programmability, on-box Python scripting, streaming telemetry, container-based application hosting, and patching for critical bug fixes. Cisco IOS XE also has built-in defenses to protect against runtime attacks.

- **Cisco Plug and Play (PnP) enabled:** A simple, secure, unified, and integrated offering to ease new branch or campus device rollouts or updates to an existing network.

- **Automated device provisioning:** This is the ability to automate the process of upgrading software images and installing configuration files on Cisco Catalyst switches when they are being deployed in the network for the first time. Cisco provides both turnkey solutions such as Plug and Play (PnP) and off-the-shelf tools such as Zero-Touch Provisioning (ZTP) and Preboot Execution Environment (PXE) that enable an effortless and automated deployment.

- **API-driven configuration:** Modern network switches such the Cisco Catalyst 9500 Series support a wide range of automation features and provide robust open APIs over Network Configuration Protocol (NETCONF, RESTCONF and gNMI) using YANG data models for external tools, both off-the-shelf and custom built, to automatically provision network resources.

- **Granular visibility:** Model-driven telemetry provides a mechanism to stream data from a switch to a destination. The data to be streamed is driven through subscription to a data set in a YANG model. The subscribed data set is streamed out to the destination at configured intervals. Additionally, Cisco IOS XE enables the push model, which provides near- real-time monitoring of the network, leading to quick detection and rectification of failures.

- **Seamless software upgrades and patching:** To enhance OS resilience, Cisco IOS XE supports patching, which provides fixes for critical bugs and security vulnerabilities between regular maintenance releases. This support allows customers to add patches without having to wait for the next maintenance release.

- **WebUI:** Embedded GUI-based device-management tool that provides the ability to provision the device, to simplify device deployment and manageability and to enhance the user experience. WebUI comes with the default image. There is no need to enable anything or install any license on the device. You can use WebUI to build a day-1 configuration and from then on monitor and troubleshoot the device without having to know how to use the CLI.

[1] Roadmap.

[2] C9500X models: minimum IOS XE software release 17.8.1 (C9500X-28C8D) and 17.10.1 (C9500X-60L4D).

[3] C9500X models: minimum IOS XE software release 17.10.1 (C9500X-28C8D) and 17.11.1 (C9600X-60L4D). SSO support requires StackWise Virtual for fixed Catalyst 9500 models. ISSU supported on C9500X models starting with 17.12.1.

[4] C9500X models: feature is not available at FCS, but will be available in future software releases only on C9500X-60L4D (not supported on C9500X-28C8D).

[5] C9500X models: Object-Group ACLs are supported only in the ingress direction.

Power supplies and fan tray

The Cisco Catalyst 9500 Series Switches support dual 1+1 redundant power supplies (AC or DC). The switches ship with one power supply by default. The second power supply can be purchased at the time the switch is ordered or at a later time. If only one power supply is installed, it should always be in power supply bay #1.

The Catalyst 9500 Series ship with up to five field-replaceable variable-speed fans. These have front-to-back airflow and can operate with up to one individual fan failure. The fan trays support fan-tray Online Insertion and Removal (OIR) and can support a maximum fan speed of up to 24,000 rpm.

Catalyst 9500X models ship with six field-replaceable variable-speed fan units. By default these have front-to-back (port-side intake) airflow fan units. The switch also has the option to select six back-to-front (port-side exhaust) airflow fans (for reversible airflow: either front-to-back or back-to-front). This unique innovation enables the Catalyst 9500X to adjust the fan directions on the power supplies, based on preferred air flow.

Note: All Catalyst 9500X fan units must be the same type (either front-to-back or back-to-front).

[7] Table Maximum. Shared hardware resource. Maximum ACEs depends on number and type of ACLs configured across various interface types.

Important notes

Directly-connected (or host) IP routes mean any /32 or /128 routes, including those are learned indirectly (clients attached to switch's own VLAN/SVI and those /32 prefixes learned over any routing protocols, such as over OSPF.

Indirectly-connected (or advertised) IP routes are subnet routes with a prefix other than /32 or 128 (for example: /8, /16, /24, etc).

UADP 2.0 based C9500-12Q, C9500-24Q, C9500-40X, and C9500-16X support 32,000 adjacency in hardware. So, they can support up to ~32,000 directly attached clients (including all adjacency) in their own VLAN/SVI.

UADP 3.0 based C9500-32C, 32QC, 24Y4C, and 48Y4C support 80,000 adjacency for SVI, with SDM template of distribution and 90,000 direct routes for all supported templates when a Layer 3 routed port is used.

In both UADP 3.0 and S1 Q200 models, the exact hardware programming (hash efficiency) of IP/mask entries depends on the specific number and type of IP/mask prefixes.

Flexible ASIC templates

Cisco Catalyst 9000 series switches use flexible Software Database Manager (SDM) ASIC templates to enable universal deployments by leveraging the UADP's ability to create resources to optimize table sizes for different places in the network. Based on how the switch is used in the network, an appropriate SDM ASIC template may be selected to configure the switch for specific features.

Catalyst 9500X models

Cisco Catalyst 9500X models support the following SDM ASIC templates

- Default (Core)
- Custom

Table 16 describes the default SDM ASIC template for C9500X models.

Table 16. SDM template descriptions for C9500X models

Features	Default Template
MAC Addresses	128,000
IP Host Routes[1]	128,000
IP LPM Routes[1][2]	2,000,000
IP Multicast Routes[1]	32,000

QoS ACLs[1]	8,000
PBR/NAT[4]	16,000
GRE Tunnels	1,024
Sampled NetFlow entries[1]	2,000,000

[1] IPv4 and IPv6 entries coexist in the same tables, but IPv6 entries require two entries.

[2] LPM entries are stored as a hash and efficiency is dependent on the actual routes learnt. Overall hashing efficiency has been improved in 17.12.2 (Defect CSCwf91503). Consider upgrading to 17.12.2 if you are hitting limitations with route scale.

[3] Per-prefix labels are divided into internal (iBGP) and external (eBGP).

[4] Feature is not available at FCS, but will be available in future software releases.

Catalyst 9500 models

The following SDM ASIC templates are supported on the Cisco Catalyst 9500 Series.

- **Distribution:** Maximizes system resources for MAC and security.
- **Core:** Maximizes system resources for unicast and multicast routing.
- **SDA:** Maximizes system resources to support fabric deployment.
- **NAT:** Maximizes system resources for Layer 3 and NAT for support collapsed core WAN deployments.

Table 17 describes the standard SDM ASIC templates for C9500 models.

Custom ASIC templates

Catalyst 9500X Models (C9500X-28C8D and C9500X-60L4D)

Beginning with the Cisco IOS XE 17.7.1 release, a custom SDM template allows you to configure several features of the template based on your requirements and not the location of the device in the network.

Table 18. Custom template FIB configurable values

Features	Default Value	Scale Values (Min – Max)	Step Units
MAC Addresses	128,000	32,000[1] – 256,000	1,000
IPv4 Host Routes	32,000	32,000[1] – 256,000	1,000
IPv6 Host Routes	16,000	16,000[1] – 128,000	1,000
MPLS Labels[3]	256,000	0[2] – 512,000	1,000
Security/Object Groups	32,000	0[2] – 64,000	1,000
Total Resources	608,000		

[1] Critical features require a minimum allocation to insure operation. If a custom value if not defined, this value is used.

[2] Some (non-critical) features are allowed to have a 0 entry allocation, to allow increased allocation of other features.

[3] Per-prefix labels are divided into internal (iBGP) and external (eBGP).

C9500-32C, C9500-32QC, C9500-24Y4C, C9500-48Y4C

Standard SDM templates can be used to configure system resources and optimize support for specific features. However SDM templates are defined based on how the device is deployed in the network.

Beginning with the Cisco IOS XE 17.3.1 release, a custom SDM template will allow you to configure the features of the template based on your requirements and not the location of the device in the network.

Table 19. Custom template configurable FIB values

Features	Scale Values (Min – Max)	Step Units	Default Value
MAC addresses	32,000 – 128,000	16,000	32,000

[1] Total Layer 2 and Layer 3 Multicast entries may not exceed 48,000.

[2] Each resource holds two SGT + MPLS entries.

[3] NetFlow entries require double entries.

Licensing

Introduction to Smart Licensing

Cisco Smart Licensing is a flexible licensing model that provides you with an easier, faster, and more consistent way to purchase and manage software across the Cisco portfolio and across your organization. And it's secure – you control what users can access. With Smart Licensing you get:

- **Easy Activation:** Smart Licensing establishes a pool of software licenses that can be used across the entire organization–no more PAKs (Product Activation Keys).

- **Unified Management:** My Cisco Entitlements (MCE) provides a complete view into all of your Cisco products and services in an easy-to-use portal, so you always know what you have and what you are using.

- **License Flexibility:** Your software is not node-locked to your hardware, so you can easily use and transfer licenses as needed.

- **Smart Licensing Using Policy (SLUP):** Enhanced version of Smart Licensing, with the overarching objective of providing a licensing solution that does not interrupt the operations of your network, rather, one that enables a compliance relationship to account for the hardware and software licenses you purchase and use.

To use Smart Licensing, you must first set up a Smart Account on Cisco Software Central (software.cisco.com).

For a more detailed overview on Cisco Licensing, go to cisco.com/go/licensingguide

** Note: A purchase of Cisco Catalyst Advantage per access point is required in order to enable the wireless controller functionality on Cisco Catalyst switches.

[1] Not supported on C9500 UADP based models.

[2] Not supported on C9500X models.

[3] Supported on C9500X models starting with 17.12.1 onwards.

[4] Need to order HSEC Key.

Managing licenses with Smart Accounts: Creating Smart Accounts by using the Cisco Smart Software Manager (SSM) enables you to manage your software licenses from a centralized website. You can set up Cisco SSM to receive daily email alerts and to be notified of expiring subscription licenses that you want to renew.

You must order a Cisco DNA or Cisco Catalyst subscription term license in order to purchase a Catalyst 9500 Series switch. When the license term expires, you can either renew the add-on license to continue using it or deactivate the add-on license and then reload the switch to continue operating with the base license capabilities.

Both the base and add-on licenses are also available for a 90-day evaluation period. An evaluation license is activated temporarily, without purchase. An expired evaluation license cannot be reactivated after reload.

Warranty

Cisco Enhanced Limited Lifetime Hardware Warranty

The Cisco Catalyst 9500 Series Switches come with an Enhanced Limited Lifetime Warranty (E-LLW) that includes Next-Business-Day (NBD) delivery of replacement hardware where available and 90 days of 8x5 Cisco Technical Assistance Center (TAC) support. Your formal warranty statement, including the warranty applicable to Cisco software, appears in the information packet that accompanies your Cisco product. We encourage you to carefully review the warranty statement shipped with your specific product before use. Cisco reserves the right to refund the purchase price as its exclusive warranty remedy. For further information about warranty terms, visit https://www.cisco.com/go/warranty.

Table 28 provides information about the E-LLW.

Table 28.   E-LLW details

	Cisco E-LLW
Devices covered	Applies to Cisco Catalyst 9500 Series Switches.
Warranty duration	As long as the original customer owns the product.
End-of-life policy	In the event of discontinuance of product manufacture, Cisco warranty support is limited to 5 years from the announcement of discontinuance.
Hardware replacement	Cisco or its service center will use commercially reasonable efforts to ship a replacement for NBD delivery, where available. Otherwise, a replacement will be shipped within 10 working days after receipt of the Return Materials Authorization (RMA) request. Actual delivery times might vary depending on customer location.
Effective date	Hardware warranty commences from the date of shipment to customer (and in case of resale by a Cisco reseller, not more than 90 days after original shipment by Cisco).
TAC support	Cisco will provide during business hours, 8 hours per day, 5 days per week, basic configuration, diagnosis, and troubleshooting of device-level problems for up to a 90-day period from the date of shipment of the originally purchased Cisco Catalyst 9500 Series product. This support does not include solution or network-level support beyond the specific device under consideration.
Cisco.com access	Warranty allows guest access only to Cisco.com.

Cisco environmental sustainability

Information about Cisco's environmental sustainability policies and initiatives for our products, solutions, operations, and extended operations or supply chain is provided in the **"Environment Sustainability"** section of Cisco's [Corporate Social Responsibility](#) (CSR) Report.

Reference links to information about key environmental sustainability topics (mentioned in the **"Environment Sustainability"** section of the CSR Report) are provided in the following table:

Sustainability topic	Reference
Information on product material content laws and regulations	[Materials](#)
Information on electronic waste laws and regulations, including products, batteries, and packaging	[WEEE compliance](#)

Cisco makes the packaging data available for informational purposes only. It may not reflect the most current legal developments, and Cisco does not represent, warrant, or guarantee that it is complete, accurate, or up to date. This information is subject to change without notice.

Cisco and Partner Services

Cisco and Partner Services offer various personalized services to enable IoT, cloud and secure networks. You can purchase advanced services designed to meet your business needs and help you maintain high-quality network performance while controlling operational costs. Please refer to Table 29 for more information on Cisco's Technical Services available for the Cisco Catalyst 9500 Series Switches.

Table 29. Technical Services

Cisco Technical Services
Cisco Smart Net Total Care Service   • Around-the-clock, global access to the Cisco TAC   • Unrestricted access to the extensive Cisco.com knowledge base and tools   • NBD, 8x5x4, 24x7x4, and 24x7x2 advance hardware replacement and onsite parts replacement and installation available   • Ongoing operating system software updates within the licensed feature set[1]   • Proactive diagnostics and real-time alerts on Smart Call Home-enabled devices
Cisco Smart Foundation Service   • NBD advance hardware replacement as available   • Access during business hours to Small and Medium-sized Business (SMB) TAC (access levels vary by region)   • Access to Cisco.com SMB knowledge base   • Online technical resources through Smart Foundation portal   • Operating system software bug fixes and patches
Cisco SP Base Service   • Around-the-clock, global access to the Cisco TAC   • Registered access to Cisco.com   • NBD, 8x5x4, 24x7x4, and 24x7x2 advance hardware replacement; return to factory option available[2]   • Ongoing operating system software updates[1]
Cisco Focused Technical Support Services

> **Cisco Technical Services**
>
> - Three levels of premium, high-touch services are available:
>   ◦ Cisco High-Touch Operations Management Service
>   ◦ Cisco High-Touch Technical Support Service
>   ◦ Cisco High-Touch Engineering Service
> - Valid Cisco Smart Net Total Care or SP Base contracts are required on all network equipment

[1] Cisco operating system updates include the following: maintenance releases, minor updates, and major updates within the licensed feature set.

[2] Advance hardware replacement is available in various service-level combinations. For example, 8x5xNBD indicates that shipment will be initiated during the standard 8-hour business day, 5 days a week (the generally accepted business days within the relevant region), with NBD delivery. Where NBD is not available, same-day shipping is provided. Restrictions apply. For details, review the appropriate service descriptions.
