## Introduction

This document describes the installation, upgrade, and registration of Firepower Threat Defense (FTD) software on Firepower appliances.

## Prerequisites

## Requirements

There are no specific requirements for this document.

## Components Used

The information in this document is based on these software and hardware versions:

- Cisco Firepower 4140 Security Appliance, which runs FXOS 2.0(1.37)
- Firepower Management Center, which runs 6.1.0.330

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, ensure that you understand the potential impact of any command.

# Background Information

FTD is a unified software image that can be installed on these platforms:

- ASA5506-X, ASA5506W-X, ASA5506H-X, ASA5508-X, ASA5516-X
- ASA5512-X, ASA5515-X, ASA5525-X, ASA5545-X, ASA5555-X
- Firepower devices (FPR2100, FPR4100, FPR9300)
- VMware (ESXi)
- Amazon Web Services (AWS)
- Kernel-based Virtual Machine (KVM)
- Integrated Service Router (ISR) module

## Configure

### Network Diagram

### Task 1. FTD Software Download

Navigate to **Next-Generation Firewalls (NGFW) > FirePOWER 4100 Series > FirePOWER 4140 Security Appliance** and choose **Firepower Threat Defense Software** as shown in the image.

### Task 2. Verify FXOS-FTD Compatibility

Task requirement

Verify the FXOS version that runs on the chassis is compatible with the FTD version you want to install in

the security module.

## Solution

Step 1. Check the FXOS-FTD compatibility.

Before you install an FTD image into the module/blade, ensure the Firepower chassis runs a compatible FXOS software. In the FXOS Compatibility Guide, check the Logical Device Compatibility table. The minimum required FXOS version to run FTD 6.1.x is 1.1(4.95), as shown in Table 2:

**Table 2 Logical Device Compatibility**

FXOS	ASA OS	Firepower Threat Defense
1.1(1.147)	9.4(1)	not supported
1.1(1.160)	9.4(1)	
...	...	
1.1(4.95)	9.6(1)	6.0.1.x
	9.6(2)	6.1

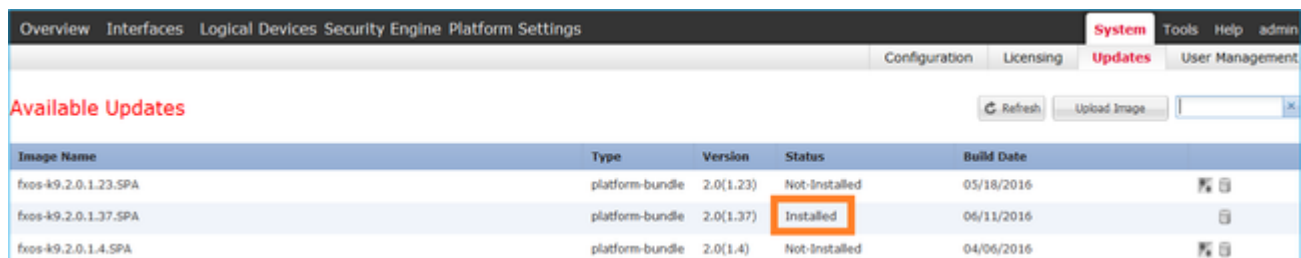

If the FXOS image is not compatible with the target FTD image, upgrade the FXOS software first.

Verify the FXOS image

Method 1. From Firepower Chassis Manager (FCM) UI Overview page, as shown in the image:

Method 2. Navigate to FCM **System** > **Update** page, as shown in the image:

Method 3. From FXOS CLI:

```
<#root>
```

```
FPR4100#
```

```
show fabric-interconnect firmware
```

```
Fabric Interconnect A:
```

Running-Kern-Vers: 5.0(3)N2(4.01.35)  
Running-Sys-Vers: 5.0(3)N2(4.01.35)

Package-Vers: 2.0(1.37)

Startup-Kern-Vers: 5.0(3)N2(4.01.35)  
Startup-Sys-Vers: 5.0(3)N2(4.01.35)  
Act-Kern-Status: Ready  
Act-Sys-Status: Ready  
Bootloader-Vers:

### Task 3. Upload FTD Image into Firepower Appliance

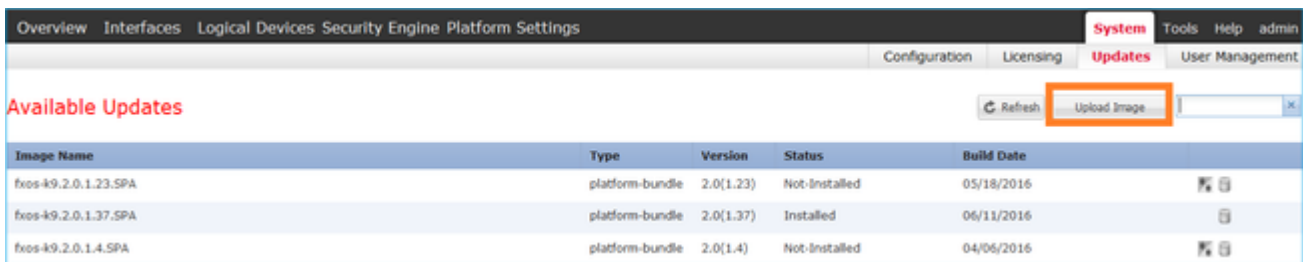

Task requirement

Upload the FTD image into FPR4100 chassis.

Solution

Method 1 - Upload the FTD image from the FCM UI.

Log into the FPR4100 Chassis Manager and navigate to **System > Updates** tab. Choose **Upload Image** to upload the file, as shown in the image.

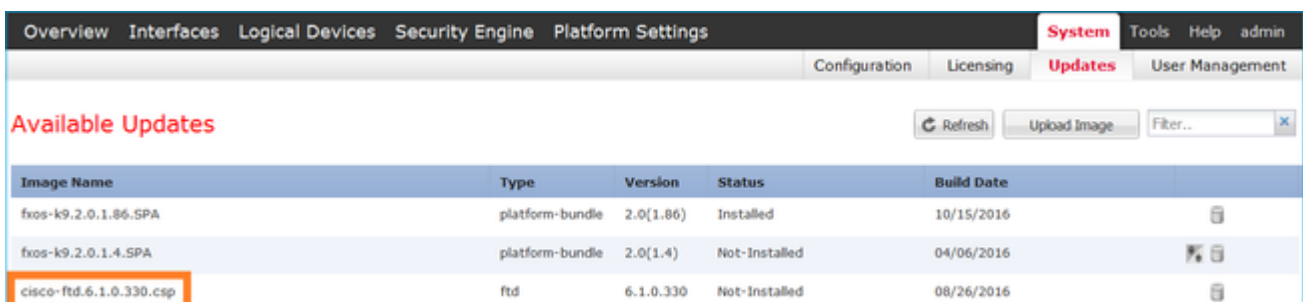

Browse to choose the FTD image file and click **Upload**, as shown in the image:

Accept the **End User License Agreement (EULA)**.

Verification is as shown in the image.

## Method 2 - Upload the FTD image from the FXOS CLI

You can upload the FTD image from an FTP, Secure Copy (SCP), Secure FTP (SFTP), or a TFTP server.

Before the image transfer starts, verify connectivity between the chassis management interface and the remote server:

```
<#root>
FPR4100#
connect local-mgmt
FPR4100(local-mgmt)#
ping 10.229.24.22
PING 10.229.24.22 (10.229.24.22) from 10.62.148.88 eth0: 56(84) bytes of data.
64 bytes from 10.229.24.22: icmp_seq=1 ttl=124 time=0.385 ms
64 bytes from 10.229.24.22: icmp_seq=2 ttl=124 time=0.577 ms
64 bytes from 10.229.24.22: icmp_seq=3 ttl=124 time=0.347 ms
```

To download the FTD image, navigate to this scope and use the **download image** command:

```
<#root>
FPR4100#
scope ssa
FPR4100 /ssa #
scope app-software
FPR4100 /ssa/app-software #
download image ftp://ftp_username@10.229.24.22/cisco-ftd.6.1.0.330.SPA.csp
```

Password:

To monitor the image upload progress:

```
<#root>
FPR4100 /ssa/app-software #
show download-task detail
```

Downloads for Application Software:

```
File Name: cisco-ftd.6.1.0.330.SPA.csp

## Task 4. Configure FTD Management and Data Interfaces

Task requirement

Configure and enable Management and Data interfaces for FTD on the Firepower appliance.

Solution

To create a new interface, log in to the FCM and navigate to the **Interfaces** tab. The current interfaces are seen. To create a new Port Channel interface, choose the **Add Port Channel** button, as shown in the image:

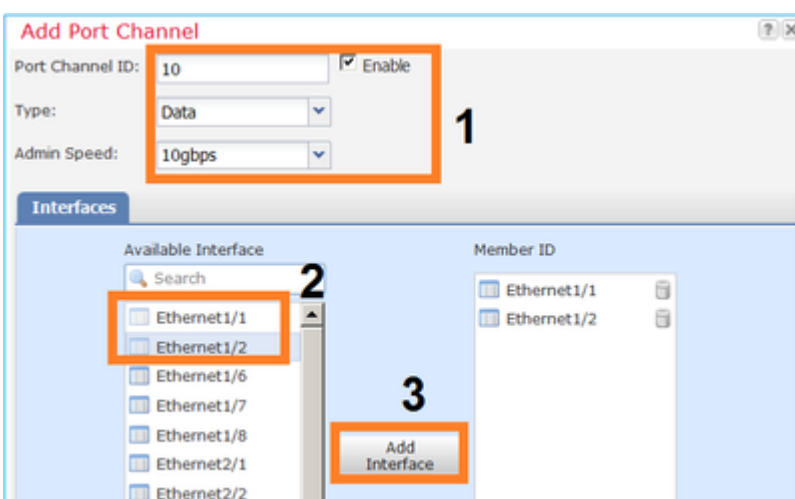

Step 1. Create a Port Channel Data Interface.

Create a new Port Channel Interface, as shown in the image:

Port Channel ID	10
Type	Data
Enable	Yes
Member ID	Ethernet1/1, Ethernet 1/2

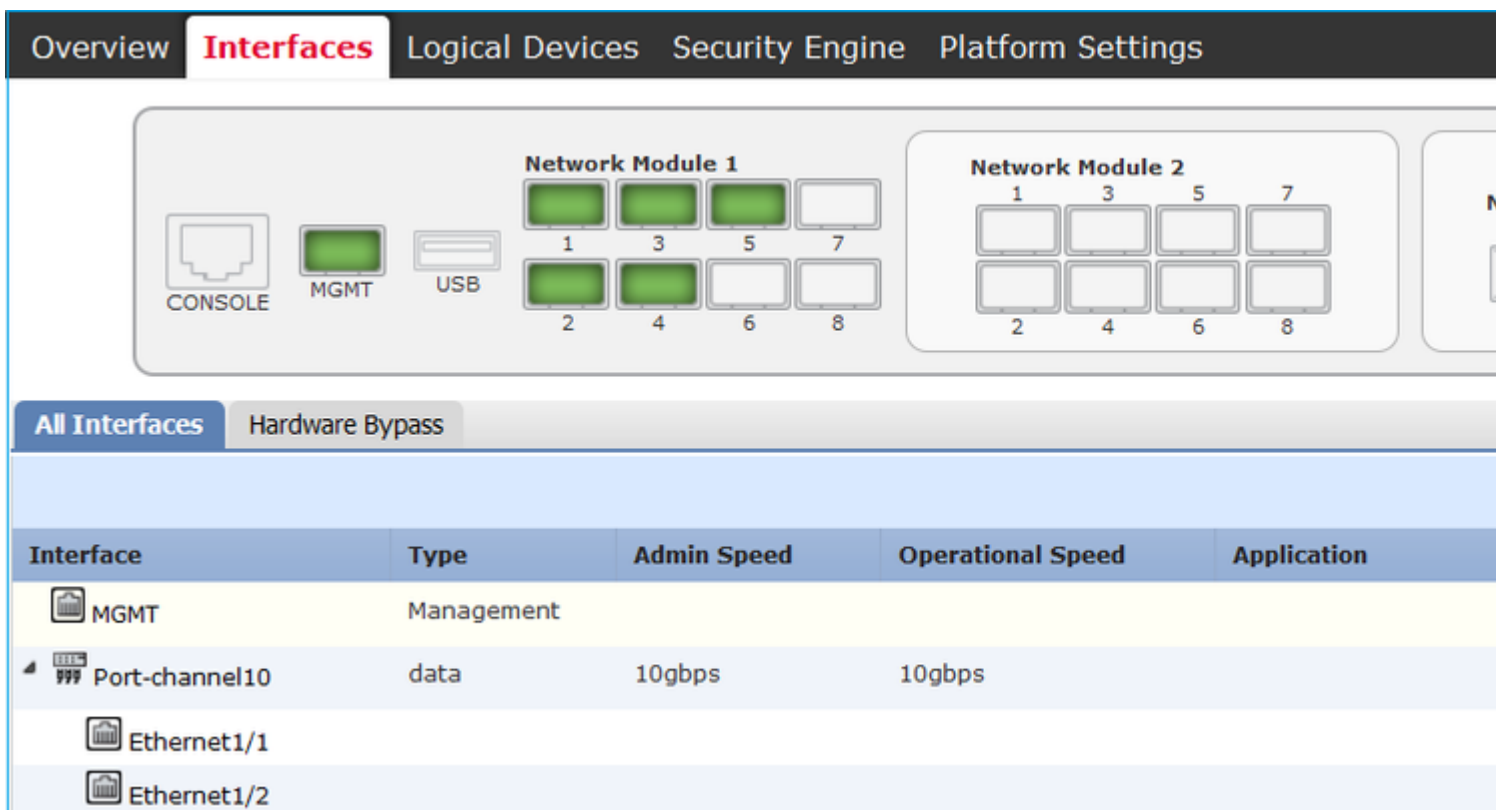

For the Port Channel ID, a value from 1 to 47.

**Note:** PortChannel 48 is used for clusters.

Verification is as shown in the image.

Step 2. Create a Management Interface.

On the **Interfaces** tab, choose the interface, select **Edit**, and configure the Management interface, as shown in the image:

## Task 5. Create and Configure New Logical Device

Task requirement

Create an FTD as a Standalone Logical Device and deploy it.

Solution

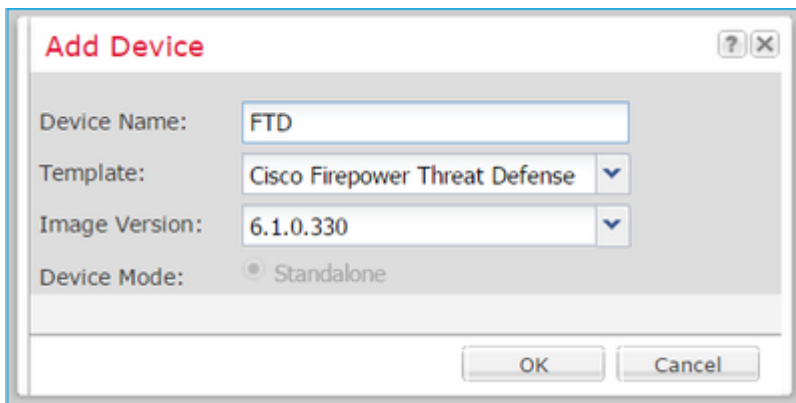

Step 1. Add a Logical Device.

Navigate to the **Logical Devices** tab and choose the **Add Device** button to create a new Logical Device, as shown in the image:

No logical devices available. Click on Add Device to add a new logical device.

Configure an FTD device with the settings shown in the image:

Device Name	FTD
Template	Cisco Firepower Threat Defense
Image Version	6.1.0.330

**Add Device**

Device Name: FTD

Template: Cisco Firepower Threat Defense

Image Version: 6.1.0.330

Device Mode:  Standalone

OK Cancel

Step 2. Bootstrap the Logical Device.

After creation of the logical device, the Provisioning “device\_name” window displays. Choose the device icon to start the configuration, as shown in the image.

**Provisioning - FTD**

Standalone | Cisco Firepower Threat Defense | 6.1.0.330

**Data Ports**

- Ethernet1/4
- Ethernet1/5
- Ethernet1/6
- Ethernet1/7
- Ethernet1/8
- Ethernet2/1

Eventing Interface	-

### Cisco Firepower Threat Defense - Configuration

General Information **Settings** Agreement

Registration Key:	<input type="text" value="*****"/>
Password:	<input type="text" value="*****"/>
Firepower Management Center IP:	<input type="text" value="10.62.148.50"/>
Search domains:	<input type="text" value="cisco.com"/>
Firewall Mode:	<input type="text" value="Routed"/> ▼
DNS Servers:	<input type="text" value="192.168.0.1"/>
Fully Qualified Hostname:	<input type="text" value="FTD4100.cisco.com"/>
Eventing Interface:	<input type="text"/> ▼

Ensure the **Agreement** is accepted and select **OK**.

Step 3. Assign the Data Interfaces.

Expand the Data Ports area and choose each interface to assign to FTD. In this scenario, one interface (Port-channel10) was assigned as shown in the image:

**Provisioning - FTD**

Application	Version	Management IP	Gateway	Management Port
FTD	6.1.0.330	10.62.148.84	10.62.148.1	Ethernet1/3
<b>Ports:</b>				
Data Interfaces:		Port-channel10		

Choose **Save** to finish the configuration.

Step 4. Monitor the Installation Process.

This is how the FTD installation progresses when monitored from the FCM UI, as shown in the images:

FTD Standalone Status: ok

Application	Version	Management IP	Gateway	Management Port	Status
FTD	6.1.0.330	10.62.148.84	10.62.148.1	Ethernet1/3	 inst

## **Task 6. Register FTD into the Firepower Management Center (FMC)**

Task requirement

Register FTD into the FMC.

Solution

Step 1. Verify basic connectivity between the FTD and the FMC.

Before you register the FTD to the FMC, verify basic connectivity between the FTD and the FMC:

```
<#root>  
  
Firepower-module1>  
  
connect ftd  
  
Connecting to ftd console... enter exit to return to bootCLI  
  
>  
  
ping system 10.62.148.50  
  
PING 10.62.148.50 (10.62.148.50) 56(84) bytes of data.
```

```
64 bytes from 10.62.148.50: icmp_seq=1 ttl=64 time=0.133 ms
64 bytes from 10.62.148.50: icmp_seq=2 ttl=64 time=0.132 ms
64 bytes from 10.62.148.50: icmp_seq=3 ttl=64 time=0.123 ms
```

Due to bootstrap configuration, the FTD has the manager FMC already configured:

```
<#root>
```

```
>
```

```
show managers
```

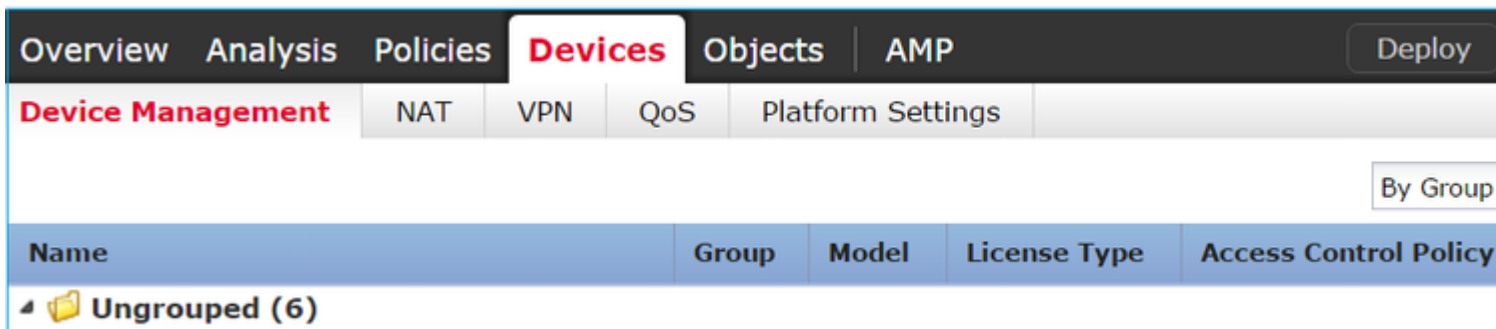

```
Host                : 10.62.148.50
Registration Key     : ****
Registration         :
```

```
pending
```

```
RPC Status          :
```

Step 2. Add the FTD into the FMC.

On the FMC, navigate to the **Devices**> **Device Management** tab and navigate to **Add...** > **Add Device**, as shown in the image.

Configure the FTD device settings, as shown in the image:

**Add Device** ? X

Host: 10.62.148.84

Display Name: FTD4100

Registration Key: cisco

Group: None

Access Control Policy: FTD4100

**Smart Licensing**

Malware:

Threat:

URL Filtering:

Advanced

On version 5.4 devices or earlier, the licensing options will need to be specified from [licensing page](#).

Register Cancel

Choose the **Register** button.

On the FMC, check the Tasks to see how the registration progresses. In addition to the registration, the FMC also:

- Discovers the FTD device (retrieve present interface configuration).
- Deploys the initial policy.

Successful registration is as shown in the image:

Name	Group	Model	License Type	Access C
<b>Ungrouped (7)</b>				
FTD4100 10.62.148.84 - Cisco Firepower 4140 Threat Defense - v6.1.0 - routed		Cisco Fir	Base, Threat, Ma	FTD4100

**Note:** In version 6.1, the Firepower Device Manager (FDM) was introduced to provide on-box management. An FTD installed on a Firepower appliance cannot be managed by the FDM.

## Task 7. Upgrade FTD

Task requirement

Upgrade the FTD from 6.1.0.330 to 6.1.0.1.

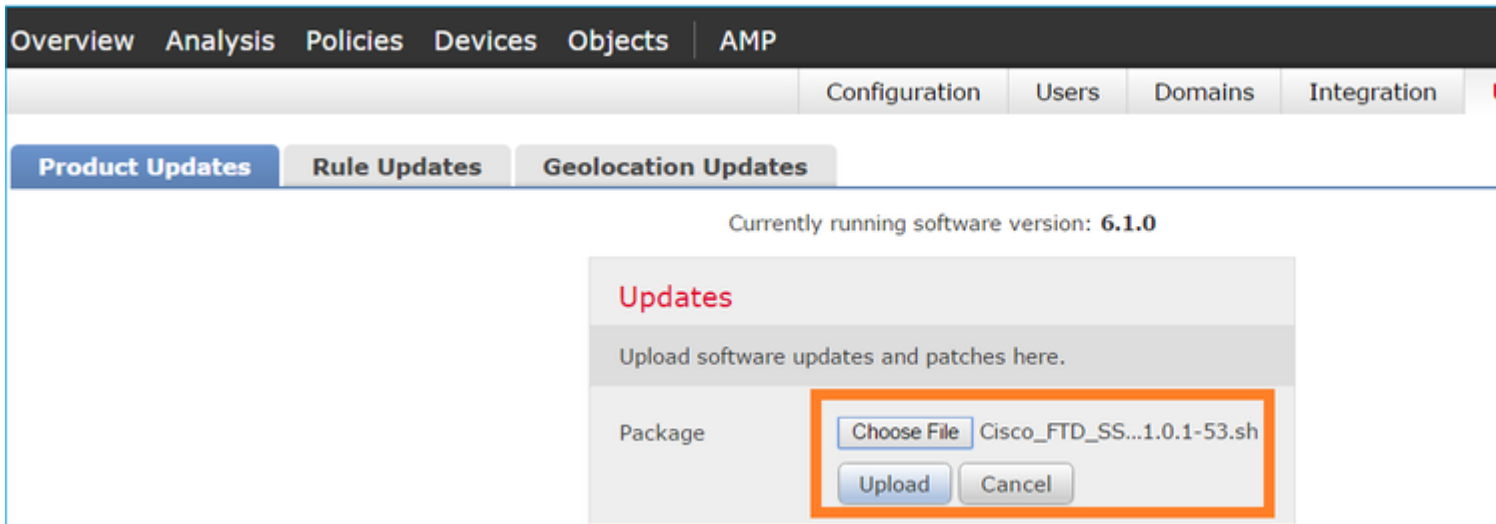

### Solution

Step 1. Verify the compatibility.

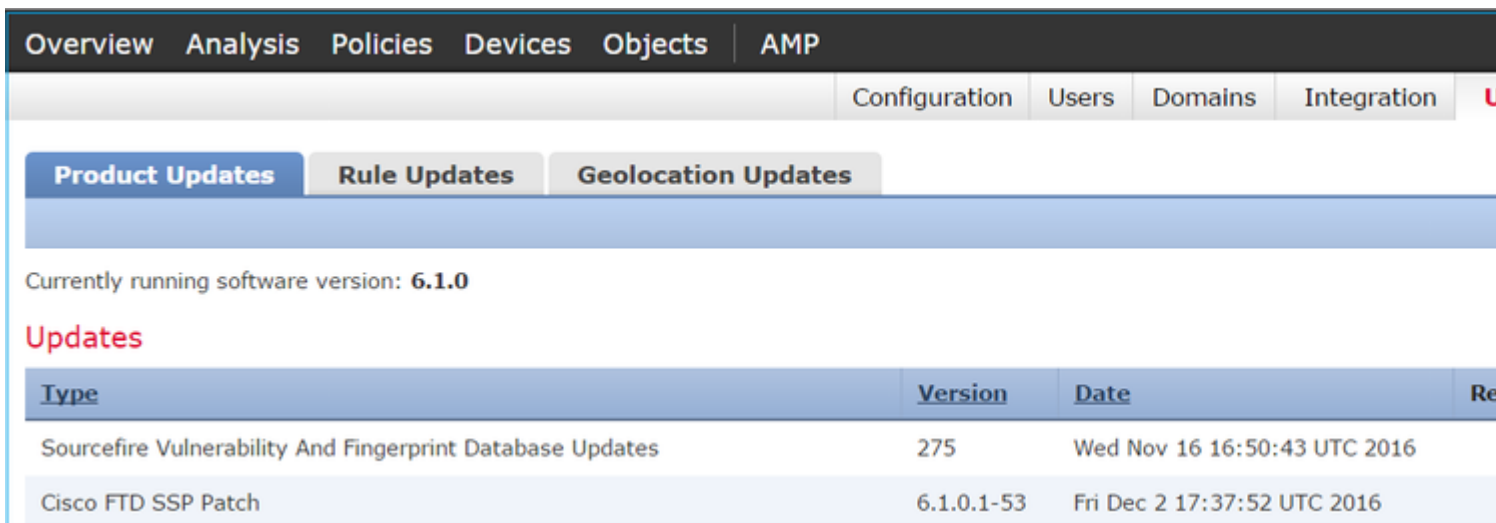

Check the FXOS Release Notes to ensure the target FTD version is compatible with the FXOS software. If needed, first upgrade the FXOS software.

Step 2. Upgrade the FTD.

The FTD software is managed by the FMC, not the FCM. To upgrade the FTD module, connect to the FMC, navigate to the **System > Updates** page, and choose **Upload Update**, as shown in the image.

Install the update on the FTD module, as shown in the images:

Optionally, you can launch a Readiness Check:

Product Updates   Rule Updates   Geolocation Updates

Currently running s

Status Log: Readiness Check To 10.62.148.84 Success

To start the upgrade process, click **Install**, as shown in the image:

**Product Updates** | **Rule Updates** | **Geolocation Updates**

Currently running software version: **6.1.0**

### Selected Update

Type	Cisco FTD SSP Patch
Version	6.1.0.1-53
Date	Fri Dec 2 17:37:52 UTC 2016
Release Notes	
Reboot	Yes

▼ **Ungrouped (1 total)**

<input checked="" type="checkbox"/>	FTD4100 10.62.148.84 - Cisco Firepower 4140 Threat Defense v6.1.0	<b>Health Po</b> <u>Initial Hea</u> <u>12:21:09</u>
-------------------------------------	--	---

[Launch Readine](#)

The upgrade requires an FTD reboot, as shown in the image:

Similarly to the FTD installation, the FTD upgrade process can be monitored from the FMC UI (Tasks). Upgrade progress can be tracked from the FTD CLI (CLISH mode).

After upgrade completion, deploy a policy to the FTD, as shown in the image:

## Verification

From the FMC UI, as shown in the image:

From the FCM UI, as shown in the image:

From the chassis CLI:

```
<#root>
FPR4100#
  scope ssa
FPR4100 /ssa #
show app-instance
Application Name      Slot ID  Admin State  Operational State  Running Version  Startup Version  CL
-----
ftd                   1        Enabled      Online              6.1.0.1.53      6.1.0.330       Not Applicable
```

From the FTD CLI:

```
<#root>
FPR4100#
connect module 1 console

Telnet escape character is '~'.
Trying 127.5.1.1...
Connected to 127.5.1.1.
Escape character is '~'.

CISCO Serial Over LAN:
Close Network Connection to Exit

>
show version
```

## Firepower 2100

The FTD on Firepower 2100 uses a single bundle that contains both FXOS and FTD images. Therefore, the installation and upgrade procedures are different than on FP4100/FP9300.

### FTD Installation on FP2100

There are 4 different procedures, which are case dependent:

Case 1: Erase configuration and restart the system with the same FTD image.

Case 2: Re-image the system with a new application software version.

Case 3: Reimage the system to its factory default settings.

Case 4: Reimage the system to its factory default settings (admin password recovery).

For details relevant to each case and its procedure, check:

[Reimage Procedures](#)

Case 2 serves the majority of FTD installation cases, while Case 3 (format and boot from ROMMON) can be used in specific cases (for example, system is unstable or in a boot loop, and so on).

### FTD Upgrade on FP2100

Because there is no separate FXOS bundle, to upgrade an FTD on FP2100, do the steps listed:

Step 1. Verify the compatibility.

If the FTD is managed by FMC (off-box management), check the Compatibility section in the software target FTD Release Notes.

Step 2. If there is a need, first upgrade the FMC. Always run the FMC software version equal to or higher than the FTD target software version.

Step 3. Upgrade the FTD.

Use the same procedure as the one documented for FP4100/9300. Important documents to read before an upgrade of the FTD:

- FTD Release Notes (For example, if you want to upgrade to version 6.3.0.2, check the 6.3.0.2 Release Notes to verify the upgrade paths and all relevant details.)
